15:30-17:00

KI-Strategie

gollnickdata.de

KI-Strategie:
Von der Ambition zur Umsetzung

- Warum KI allein keine Strategie ist
- Wie Unternehmen echten Wert schaffen
- Wie Governance & Compliance integriert werden

gollnickdata.de

Agenda: KI-Strategie

Ziel: strategisches Fundament und Risikoverständnis legen

Tag 1

01
Was bedeutet „Strategie" wirklich?

02
Das KI-Strategie-Framework

03
Ziele setzen: Why and What?

Tag 2

04
Wertrealisierung: Wo entsteht Wert?

05
Operating Model & Organisation

06
Compliance als Designprinzip

07
Vom Use Case in die Produktion

What Is Strategy – and What Is Not?

Strategy IS …

- Conscious, deliberate decisions
- Long-term goals under uncertainty
- Clear priorities and trade-offs

Strategy is NOT…

- A list of projects
- A buzzword in the annual report
- "We're doing AI now too“
- An experimental laboratory

Exercise 1

1. Hat euer Unternehmen eine KI-Strategie?
2. Woran erkennt man das konkret?
3. Ist es eher Vision oder konkrete Steuerung?

→ *3 Stichpunkte pro Gruppe!*

10 min 3-4er Breakouts

5 min Plenum

Why AI initiatives fail

Reasons for AI failure?

Too many PoCs without prioritization

"Currently 14 PoCs run by 8 data scientists"

"Management comes with new ideas each week"

Governance considered too late

"AI product was shut done due to regulatory risks"

"AI tech stack did not get IT security committee approval"

Insufficient resources and skills

"Global 1h AI training was launched"

"No AI product owner could be nominated as no one has the skills"

"Data & AI team needs to reduce headcount and cost of data platform as part of IT cost reduction"

Missing ownership and accountability

"AI product developed but no one to take over maintenance"

"AI product developed but too expensive"

No clear target vision

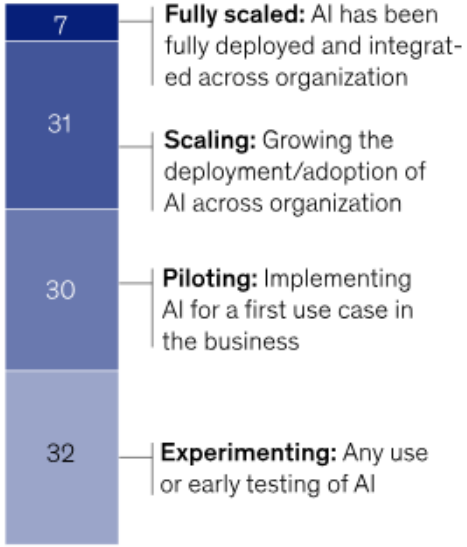
"Management stopped use case after 12 months as new ideas came in"

"Random list of efficiency cases and no effectiveness case on the list"

Study 1: status quo & AI success criteria

McKinsey 2025

Phase of AI use among organizations using AI in 2025



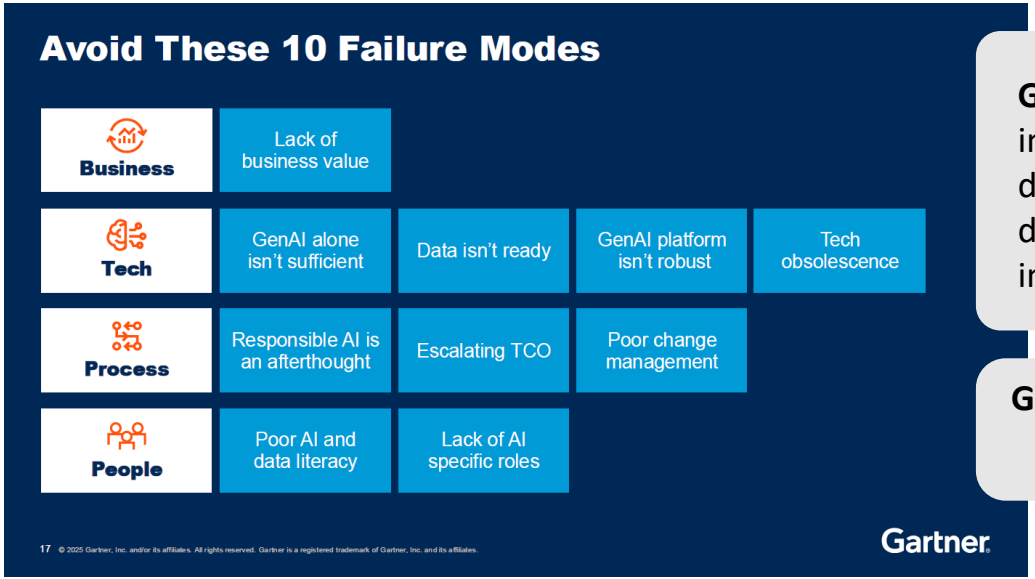
Studien-Erkenntnisse:

- KI-PoCs sind in Unternehmen weit verbreitet
- Skalierte, produktive Lösungen bleiben die Ausnahme
- Erfolgreiche Unternehmen nutzen KI weit über Effizienzgewinne hinaus als **Innovationstreiber und Transformationskatalysator** um ihre Geschäftsprozesse neu zu erfinden
- Was hält zurück:
    - **fehlende Strategie und Priorisierung** (AI roadmap, leadership alignment on value creation, human in the loop processes, senior leadership engagement)
    - **Fehlende Organisation und Governance** (Neue Prozesse, agile Arbeitsweise, schnelle Entwicklungszyklen, product mindset, strategic workforce planning anticipating AI)
    - **Mangelnde Daten**(qualität)
    - **Mangelnde Investment-Budgets**

Source: McKinsey Global AI Survey 2025 https://www.mckinsey.com/capabilities/quantumblack/our-insights/the-state-of-ai

Study 2: it is not about technology

Gartner



Gartner's 80% Rule: Gartner research indicates roughly 85% of AI projects fail to deliver on projected value, due to bias in the data, misaligned algorithms, or project team implementation.

Gartner, 2018 (2022 forecast)

Gartner's 50% failure rate (on GenAI Projects)

Gartner, January 2026

Der entscheidende Engpass liegt nicht in der KI-Technologie – sondern in Strategie, Prozessen und Skills.

Quelle: MIT Sloan Management Review / Gartner: https://sloanreview.mit.edu/article/five-trends-in-ai-and-data-science-for-2026/, https://www.gartner.com/en/newsroom/press-releases/2024-02-28-gartner-predicts-80-percent-of-data-and-analytics-governance-initiatives-will-fail-by-2027-due-to-a-lack-of-a-real-or-manufactured-crisis-

The Core Problem Is Rarely AI — It's Missing Strategy

AI without a goal remains an experiment

AI without accountability remains a toy

AI without governance becomes a risk

That's exactly why we need an AI strategy — not just AI projects.

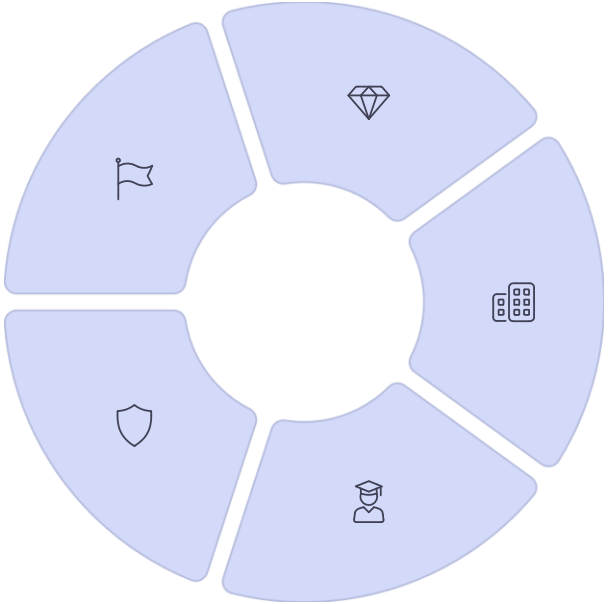
AI Strategy framework – 5 building blocks

Ambition & Target Vision

Wohin wollen wir mit KI? Was ist unser Nordstern?

Risk & Compliance by Design

Governance von Anfang an eingebettet



Value Pools & Prioritisation

Wo entsteht der größte Hebel für das Unternehmen?

Operating Model

Organisation, Prozesse und Technologie im Einklang

Capabilities

Kompetenzen, Talente und Ressourcen gezielt aufbauen

Ambition & Target Vision – Example 1

AI strategy 2027

Illustrative case example

HORIZON 1: FOUNDATION

"Get the basics right"

- Unified data platform live AI governance framework & CoE established
- 5 production-grade AI use cases in core processes
- All relevant staff AI-literate (baseline training)

HORIZON 2: SCALE

"Prove value at scale"

- 20+ AI use cases in production across BUs
- AI-assisted underwriting covering 60% of SME portfolio
- Claims automation rate: 65% straight-through processing
- Internal AI Champion network: 80 trained champions across org

HORIZON 3: LEAD

"Compete on intelligence"

- Real-time risk pricing for motor and property live
- Personalised customer lifecycle management fully AI-driven
- AI contributes measurably to top-line and combined ratio
- Recognised as AI leader by industry benchmark

Prioritized

Chronological phases

Transformation based

Milestones

Ambition & Target Vision – Example 2

AI & data strategy – target vision

Illustrative case example

We want to enable our consumer-centric ecosystem with the right data and AI products

CONTENT ECONOMICS

Produce more of what works – faster and cheaper.

Strategic logic: AI scales and innovates content production, and speeds up newsrooms.

KPIs:

- Automated article volume: 800/month (structured formats)
- Journalist time saved on research: target 25%
- Content production cost per unit: -20% by 2026
- Time-to-publish for breaking news: -40%

AUDIENCE INTELLIGENCE

Know our audience better than any other platform does

Strategic logic: First-party data is our most defensible asset. AI makes it actionable at scale.

KPIs:

- Subscriber retention rate: from 71% → 85%
- First-party data profiles: from 1.2M → 4M enriched
- Personalisation coverage: 0% → 60% of digital touchpoints

MONETIZATION

Turn data into marketable products

Strategic logic: Digitize TV business through tech-driven ad products and diversify revenues through new DTC and B2B revenue streams.

KPIs:

- …ID user penetration 15% → 30%
- Contextual ad CPM premium vs. behavioural: target +35%
- New B2B data revenue stream: €8M by 2027 (cross-selling on platform)
- Programmatic yield improvement: +18% (through digitized and new TV targeting solution)

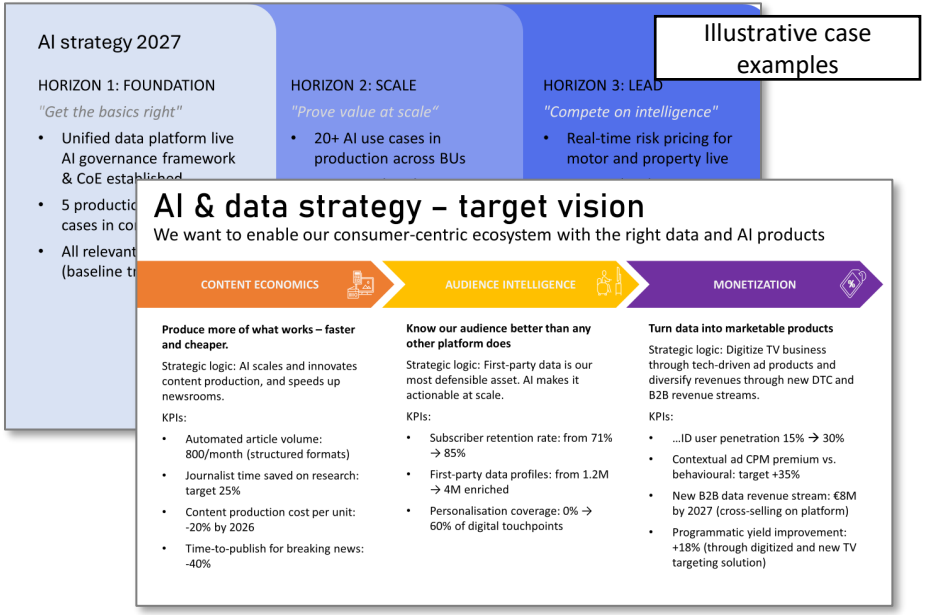
Value chain based

Impact levers

Clear “Why?”

Different responsibilities

Ambition & Target Vision



- Grounded in corporate strategy
  Explicit impact levers or roadmap alignment — not a parallel AI universe.
- Few ambitious KPIs — with a baseline
  2–4 metrics maximum. Where are we today? Where do we need to be — and by when?
- Strategic bets — not a use case catalogue
  What do we build, buy, or partner? What do we deliberately NOT do?
- Initiatives with resources and timeline
  Every strategic bet needs a budget, an owner, and a delivery commitment.
- Governance cadence locked in from day one
  Quarterly review minimum. OKRs, escalation paths, board visibility.

Exercise 2

1. Recherchiert die KI-Strategie folgender Unternehmen (ODER): BR/ARD, Bosch, Telekom, Axel Springer, BMW
2. Fasst die wichtigsten Elemente kurz und bündig selbst oder mit KI zusammen!
3. Gibt es Inhalte zu Governance / Verantwortlichkeiten und Human Oversight?

GenAI Use Cases – Market study

Generative AI productivity impact by business functions[1]

Low impact — High impact

	Total, % of industry revenue	Total, $ billion	Marketing and sales	Customer operations	Product R&D	Software engineering	Supply chain and operations	Risk and legal	Strategy and finance	Corporate IT[2]	Talent and organization
			760–1,200	340–470	230–420	580–1,200	290–550	180–260	120–260	40–50	60–90
High tech	4.8–9.3	240–460									
Banking	2.8–4.7	200–340									
Pharmaceuticals and medical products	2.6–4.5	60–110									
Education	2.2–4.0	120–230									
Telecommunications	2.3–3.7	60–100									
Healthcare	1.8–3.2	150–260									
Insurance	1.8–2.8	50–70									
Media and entertainment	1.8–3.1	80–130									
Advanced manufacturing[3]	1.4–2.4	170–290									
Consumer packaged goods	1.4–2.3	160–270									
Advanced electronics and semiconductors	1.3–2.3	100–170									

Weitere exkludiert.

Note: Figures may not sum to 100%, because of rounding. [1]Excludes implementation costs (eg, training, licenses). [2]Excluding software engineering. [3]Includes aerospace, defense, and auto manufacturing. [4]Including auto retail.
Source: Comparative Industry Service (CIS), IHS Markit; Oxford Economics; McKinsey Corporate and Business Functions database; McKinsey Manufacturing and Supply Chain 360; McKinsey Sales Navigator; Ignite, a McKinsey database; McKinsey analysis

Selected examples of key use cases for main functional value drivers (nonexhaustive)

Value potential of function for the industry: High — Low

	Total value potential per industry, $ billion (% of industry revenue)	Value potential, as % of operating profits[1]	Product R&D, software engineering	Customer operations	Marketing and sales	Other functions
Banking	200–340 (3–5%)	9–15	**Legacy code conversion** Optimize migration of legacy frameworks with natural-language translation capabilities	**Customer emergency interactive voice response (IVR)** Partially automate, accelerate, and enhance resolution rate of customer emergencies through generative AI–enhanced IVR interactions (eg, for credit card losses)	**Custom retail banking offers** Push personalized marketing and sales content tailored for each client of the bank based on profile and history (eg, personalized nudges), and generate alternatives for A/B testing	**Risk model documentation** Create model documentation, and scan for missing documentation and relevant regulatory updates
Retail and consumer packaged goods[2]	400–660 (1–2%)	27–44	**Consumer research** Accelerate consumer research by testing scenarios, and enhance customer targeting by creating "synthetic customers" to practice with	**Augmented reality–assisted customer support** Rapidly inform the workforce in real time about the status of products and consumer preferences	**Assist copy writing for marketing content creation** Accelerate writing of copy for marketing content and advertising scripts	**Procurement suppliers process enhancement** Draft playbooks for negotiating with suppliers
Pharma and medical products	60–110 (3–5%)	15–25	**Research and drug discovery** Accelerate the selection of proteins and molecules best suited as candidates for new drug formulation	**Customer documentation generation** Draft medication instructions and risk notices for drug resale	**Generate content for commercial representatives** Prepare scripts for interactions with physicians	**Contract generation** Draft legal documents incorporating specific regulatory requirements

[1]Operating profit based on average profitability of selected industries in the 2020–22 period.
[2]Includes auto retail.

McKinsey & Company

Source: McKinsey study (June 2023): https://www.mckinsey.com/capabilities/tech-and-ai/our-insights/the-economic-potential-of-generative-ai-the-next-productivity-frontier

Example: Insurance

Allianz

AI use cases across the insurance value chain

	Marketing	Product development	Sales & Distribution	Underwriting	Customer service & policy administration	Claims management
Use cases	• Predictive analytics • Automated demand analysis	• Analysis of customer preferences • Product innovation	• Tailored product advice • Sales process automation	• Image analysis • Natural language processing (NLP)	• Predictive analysis • Voice recognition • NLP • Risk prevention and mitigation	• Prediction of claim patterns • Image recognition • Anomaly/fraud detection
Benefits	• New marketing channels • Tailored outreach	• Accurate pricing • Tailored products • Rapid product adjustment	• Reducing sales costs, thus enhancing affordability	• Improved quality/speed of risk analysis, including complex risks	• Personalised service • Improved customer engagement • Increased resilience of insureds	• Accurate claims assessments • Fraud reduction • Faster responses

Source: The Geneva Association, adapted from Eling et al. and Accenture

Which AI Use Cases Are Really Worth It?

Not everything that's possible is worthwhile.

🔭 STRATEGIC LIGHTHOUSES High value, high effort → **invest deliberately** *Example: "Proprietary Risk Model"*	⏳ QUICK WINS High value, manageable effort → **start now** *Example: "Email Classification"*
🚫 STAY AWAY Low value, high effort → **consciously stop** *Example: "Fully Autonomous Underwriting"*	💡 NICE TO HAVE Low value, low effort → **only if capacity allows** *Example: "AI-generated Internal Reports"*

Y-axis:

Business Impact

(low → high)

X-axis: Feasibility (low → high)

Also: probability that impact is reached

Impact Factors

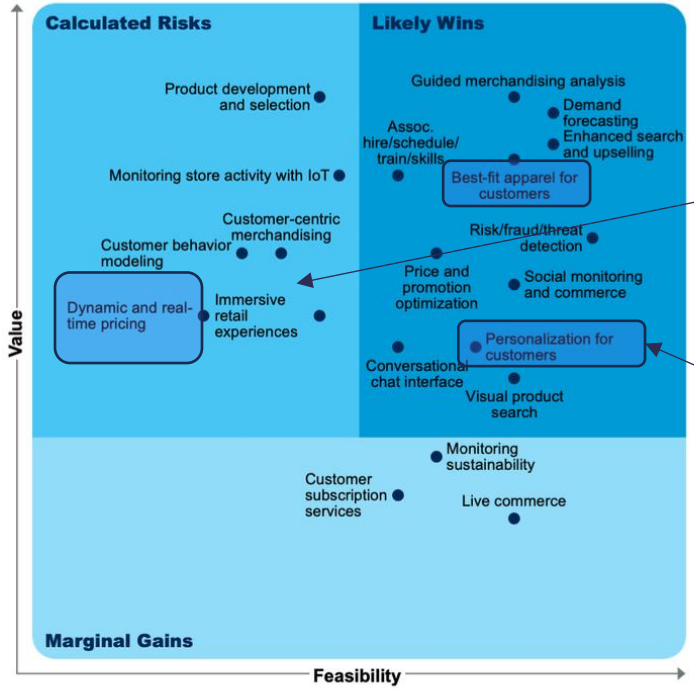
- Revenue
- Efficiency
- Customer Satisfaction
- Risk Reduction

Feasibility Factors

- Data Availability
- Complexity
- Time-to-Value
- Change Management / Business Engag.

Example: Retail

Artificial Intelligence Use-Case Comparison for Short Life Cycle Retail



Source: Gartner
798784

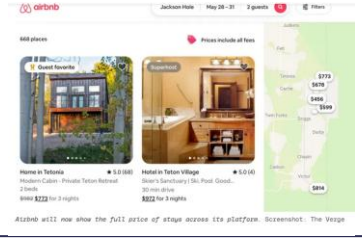
🔭 STRATEGIC LIGHTHOUSE: "Dynamic pricing"

High value, high effort

→ **invest deliberately**

airbnb

Smart pricing



🏆 LIKELY WIN: "Personalization"

High value (revenue gain),

manageable effort

zalando

Best fit

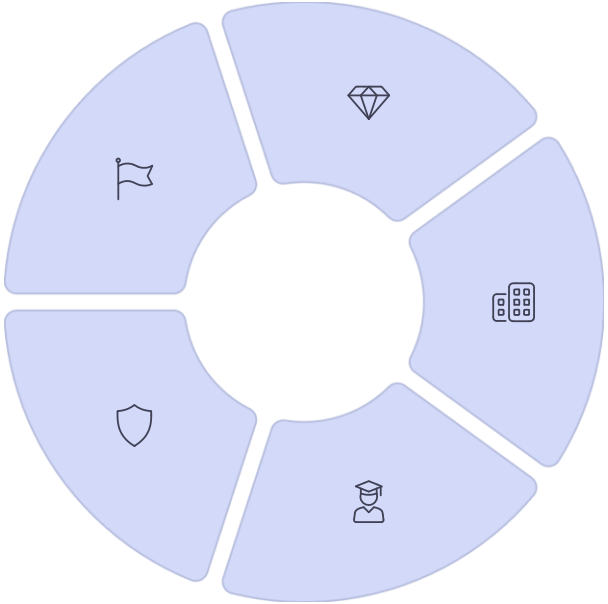
Governance von Anfang an eingebettet



Value Pools & Prioritisation

Wo entsteht der größte Hebel für das Unternehmen?

Operating Model

Organisation, Prozesse und Technologie im Einklang

Capabilities

Kompetenzen, Talente und Ressourcen gezielt aufbauen

How Do Companies Organise AI?

Centralised

- Central decision-making
- Unified standards
- High control

Best fit: High regulation, low AI maturity

Hybrid

- Central guardrails
- Decentralised execution
- Clear roles and responsibilities

Best fit: Multiple business units, scaling planned

Decentralised

- Business units drive AI
- Minimal central role
- High speed

Best fit: High AI maturity, innovation focus, lower regulatory pressure

Operating Model ≠ Org Chart → It's about decisions & accountability

Steering & Governance: Who Decides What?

Unklare Ownership führt zu Stillstand

Who prioritises use cases?

Defining which AI initiatives move forward — and which don't.

Who owns the budget?

Allocating and controlling financial resources for AI investments.

MIT Sloan Review

5. Debate will continue over who should manage AI.

Randy's latest survey of data and AI leaders in large organizations — the 2026 AI & Data

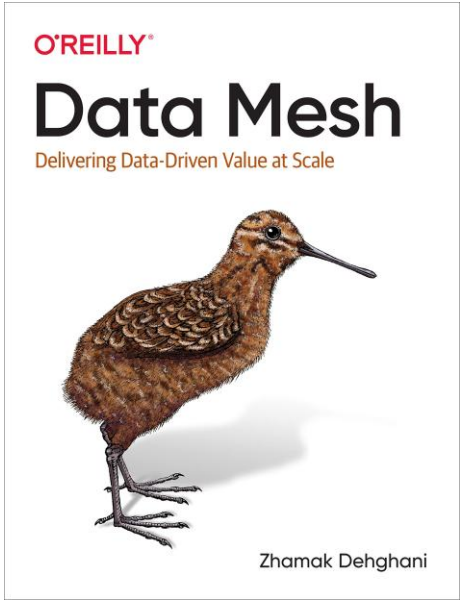
Who carries the risk?

Accountability for model failures, data incidents, and operational risk.

Who is accountable for compliance?

Ensuring regulatory obligations are met across the full AI lifecycle.

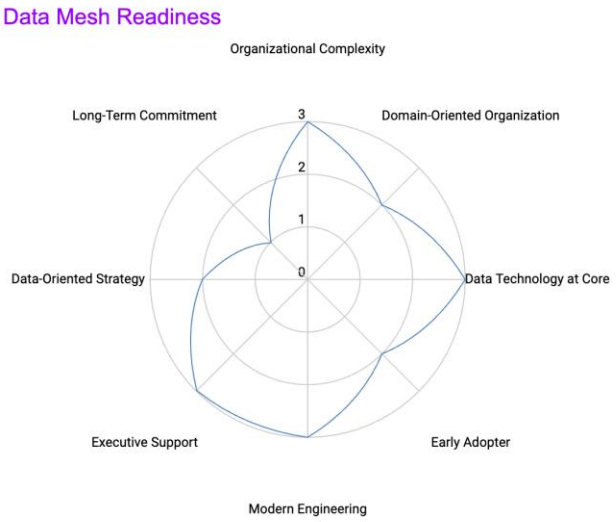
Data Mesh concept



https://www.amazon.de/-/en/Data-Mesh-Delivering-Data-Driven-Value/dp/1492092398

Hybrid "federated" approach

- **Domain-driven Data Ownership:** Business units manage data – no central bottleneck!
- **Data as a Product:** Data is treated as a product, ensuring quality, discoverability and usability for users
- **Self-serve Data Platform:** centralized IT team provides the platform
- **Federated Computational Governance:** A federated model ensures data interoperability and compliance through automated, shared policies



Sample assessment of company readiness by https://caroli.org/en/data-mesh-readiness/

Exercise 4

1. Wo steht Ihr heute?
2. Wo wollt Ihr hin?
3. Welches Modell würde in eurem Unternehmen funktionieren – und warum?

→ *1 Zusammenfassung pro Gruppe*

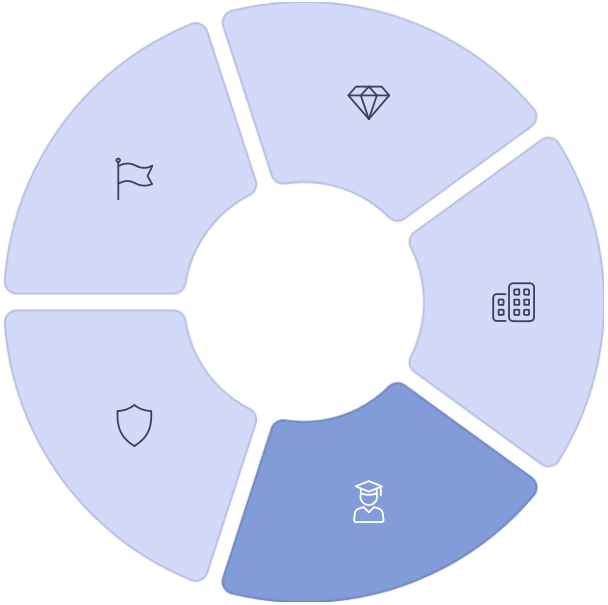
Wohin wollen wir mit KI? Was ist unser Nordstern?

Risk & Compliance by Design

Governance von Anfang an eingebettet



Value Pools & Prioritisation

Wo entsteht der größte Hebel für das Unternehmen?

Operating Model

Organisation, Prozesse und Technologie im Einklang

Capabilities

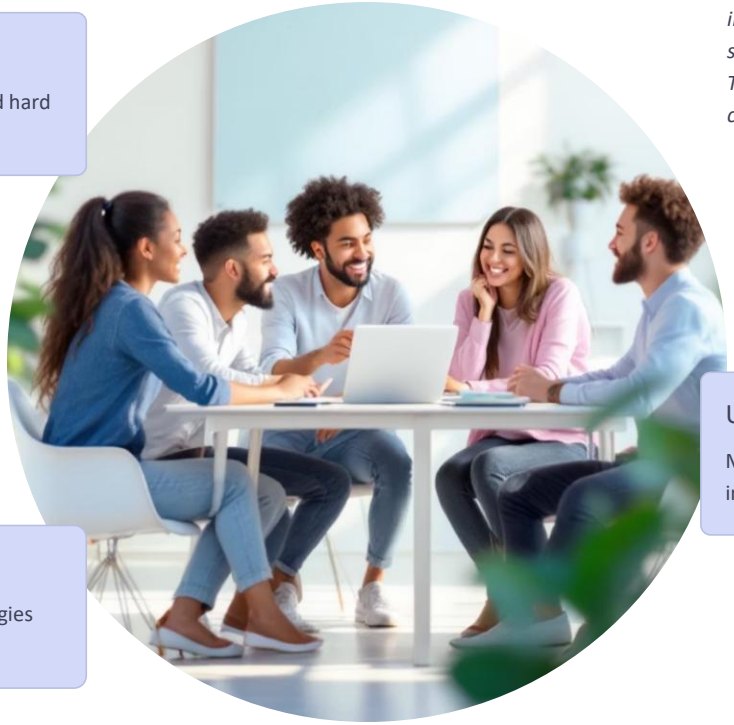
Kompetenzen, Talente und Ressourcen gezielt aufbauen

The team – the biggest bottleneck?

Most companies underestimate the human investment required to make AI strategies succeed.
The real constraint is not compute — it's capability.

Scarce Talent

AI talent is scarce, unevenly distributed, and hard to retain



Underestimated Investment

Most companies underestimate the human investment required

Capability Gap

The capability gap is the #1 reason AI strategies stall after PoC

What Skills does an AI-ready organisation need?

Strategic & Leadership Skills

- Defining AI ambition and priorities
- Managing AI programmes and portfolios
- Communicating AI decisions to the board

Bridging Skills
Most Critical & Most Missing

- Translating business problems into AI use cases
- Evaluating AI outputs with domain knowledge
- Driving adoption and change in business units

Technical Skills

- Data engineering and architecture
- Model development and fine-tuning
- MLOps, monitoring, and deployment

Most organisations are strongest at Technical Skills — and weakest exactly where it matters most.

Who Does What? The Roles That Make AI Work

Every role plays a part in making AI succeed.

Mit dem Aufkommen von GenAI werden KI Rollen technischer (mehr Integrationsarbeit) *Siehe auch morgen: Aufgaben der **Kernrollen***

Business (“Domain”)

- Executive AI Sponsor
- **AI Product Owner**
- **Business Translator / AI Champion**

Centre

- AI Programme Manager
- Data Owner / Data Steward
- AI Ethics & Compliance Officer

Technical

- **Data Engineer**
- **ML Engineer / Data Scientist**
- MLOps Engineer

The Business Translator

- Bridges technical teams and business units
- Speaks both languages fluently
- Most impactful early hire — rarely on any org chart

MLOps & Compliance Roles

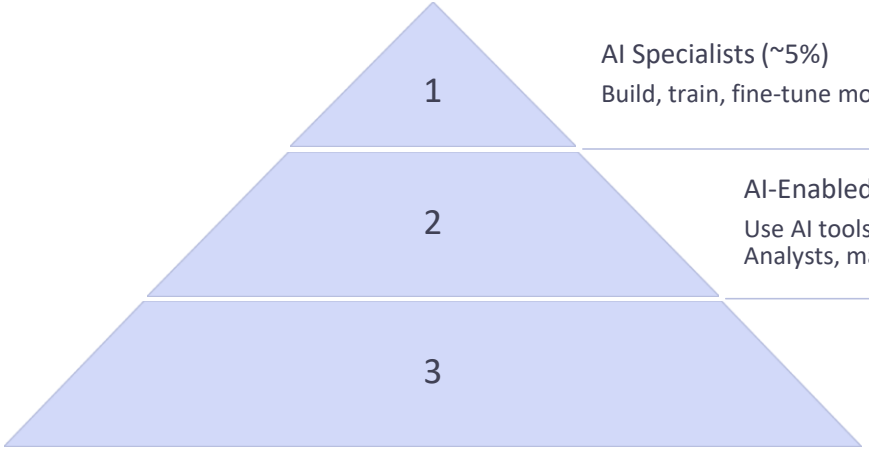
- Getting to production requires more than building
- Ongoing monitoring, retraining, incident response
- Chronically understaffed in most organisations

For Each Skill: Develop, Hire, or Source Externally?

DEVELOP Internally	HIRE Externally	PARTNER / PLATFORM
When: Long-term need, tied to proprietary data or processes	**When:** Skill is scarce, needed fast, or too costly to grow from scratch	**When:** Commodity skill, temporary need, or already covered by tooling
Examples: Business Translators, internal AI governance, domain fine-tuning	**Examples:** Senior ML Engineers, AI Legal/Ethics specialists	**Examples:** Cloud AI platforms, consulting sprints, API model access
Tradeoff: Takes time — but builds lasting competitive advantage	**Tradeoff:** Cost and integration — but accelerates capability quickly	**Tradeoff:** Creates dependency — manage contractually and deliberately

"The right mix follows your strategy — not your hiring budget."

AI Readiness Is Not Just a Tech Team Problem



AI Specialists (~5%)

Build, train, fine-tune models. MLOps, data engineering, AI architecture.

AI-Enabled Professionals (~30–40%)

Use AI tools confidently. Evaluate, prompt, and critically assess AI outputs. Analysts, marketers, lawyers, HR, finance, ops.

AI-Aware Employees (All remaining)

Understand what AI is and what it is not. Know when to use it — and when not to. Basic data literacy and ethical awareness.

Tier 1

Build: deep investment, narrow group

Tier 2

Augment: highest ROI for upskilling investment

Tier 3

Adopt: culture, trust, and awareness — not training courses

"The question is not 'who needs AI skills' — it's 'what level does each role need?'"

Study: Skills are changing

WORLD ECONOMIC FORUM — FUTURE OF JOBS REPORT 2025

1,000+ employers · 14M+ workers · 55 economies

Skills Growing in Importance ↑

1. AI & Big Data Literacy — #1 fastest-growing skill globally
2. Analytical & Critical Thinking
3. Creative Thinking & Problem Solving
4. Networks, Cybersecurity & Tech Literacy
5. Resilience, Adaptability & Lifelong Learning
6. Leadership & Social Influence
7. Curiosity — ability to learn continuously

Skills Declining in Relevance ↓

1. Manual data entry & repetitive clerical tasks
2. Routine document processing
3. Basic bookkeeping & administrative coordination
4. Low-complexity customer communication
5. Fixed-procedure quality control

39%

Skills Change by 2030

of workers' core skills will change

86%

AI Transformation

of employers expect AI to transform their business

56%

Wage Premium

for workers with verified AI skills (PwC, 2025)

63%

Skills Gap Barrier

of employers cite skills gap as their #1 barrier to AI transformation

"The gap between AI-skilled and AI-unaware employees is already a competitive divide."

The CDO Can't Do It Alone — And Shouldn't Have To

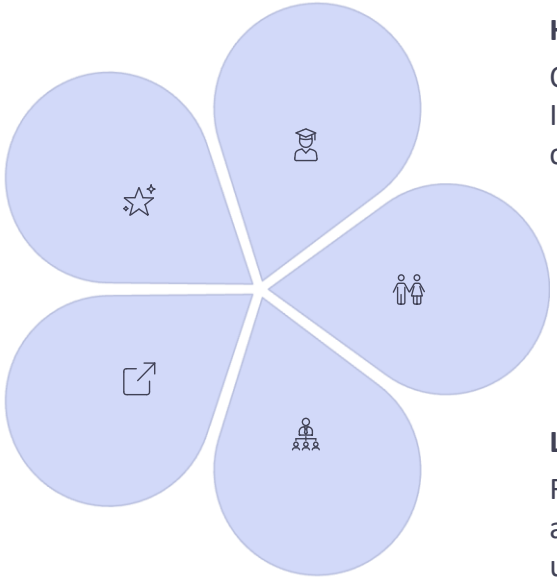
Organisational AI enablement is a team sport!

AI Center of Excellence (CoE)

Sets standards, governance, tooling, and guardrails. Enables everyone else to succeed.

External Partners & Platforms

Coursera, LinkedIn Learning, Microsoft, Google, AWS AI certifications. Cover the long tail at low cost.



HR & L&D

Owns the upskilling curriculum. Integrates AI literacy into onboarding & career paths. Deploys learning at scale.

Business Unit AI Champions

Embedded in each department. Drive adoption, surface feedback, translate needs. "Trusted peer."

Line Managers

Role-model AI adoption. Set expectations and create psychological safety. An underestimated lever.

❌ Common Failure Pattern

"The CAIO is asked to lead AI strategy AND train the entire workforce AND manage vendor relationships AND drive adoption in every BU. That's four jobs. It doesn't work."

✅ What Works

"The CoE sets the standard. HR delivers it. Champions embed it. Managers normalise it. The CAIO orchestrates — not executes."

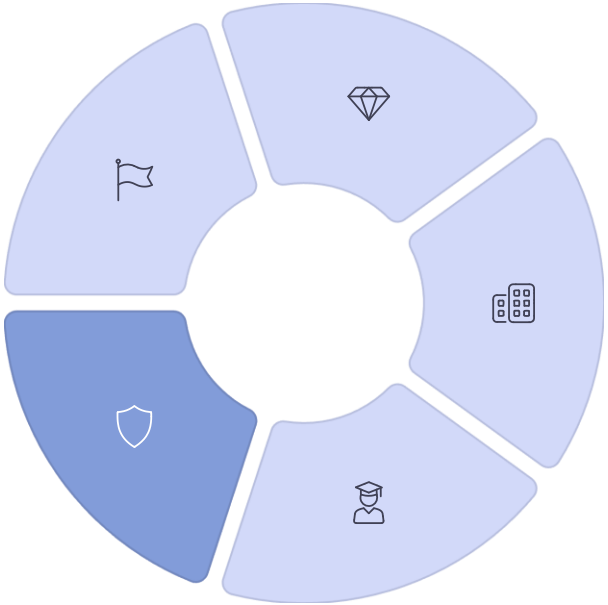
AI Strategy framework – 5 building blocks

Ambition & Target Vision

Wohin wollen wir mit KI? Was ist unser Nordstern?

Risk & Compliance by Design

Governance von Anfang an eingebettet



Value Pools & Prioritisation

Wo entsteht der größte Hebel für das Unternehmen?

Operating Model

Organisation, Prozesse und Technologie im Einklang

Capabilities

Kompetenzen, Talente und Ressourcen gezielt aufbauen

Why Compliance Is the Beginning - Not the End

→ EU AI Act

Risk classes & documentation obligations

→ GDPR

Privacy by Design across the full lifecycle

→ Model Risks

Bias, drift, explainability

→ Documentation Duty

Continuous, not a one-time audit

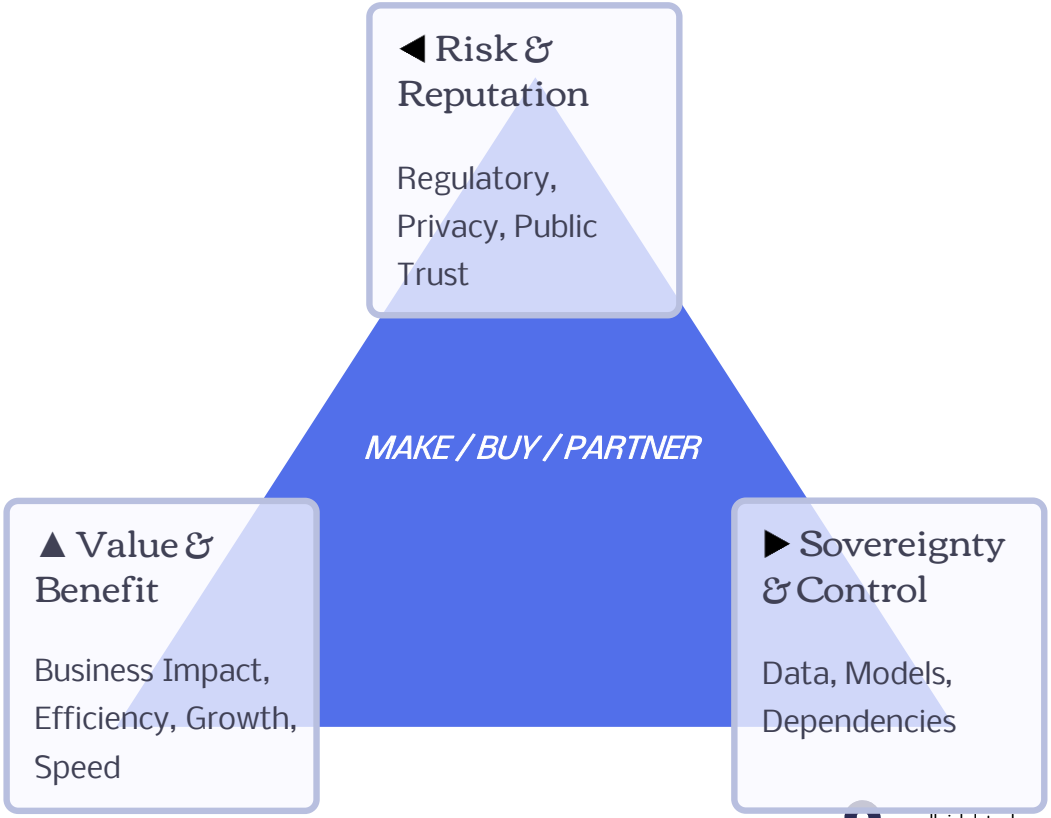
Core Principle

"Compliance is not a barrier — it's a design parameter."

Further regulations:

Deep dive follows in the Compliance block!

A trilemma:
optimization for trust, speed and control

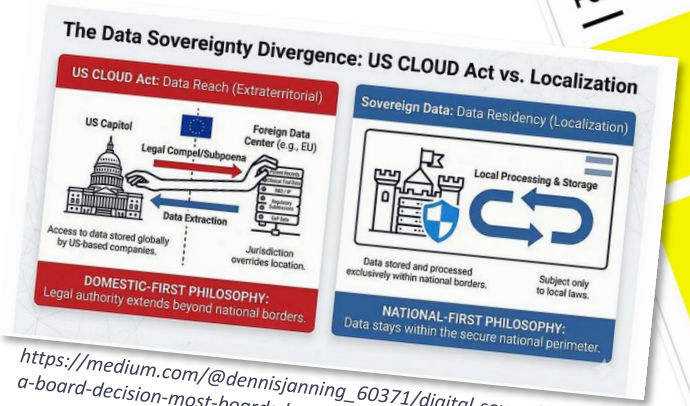


Key Principle

"AI strategy is not a tool comparison — it's a balanced management decision."

Governing AI in 2026: A global regulatory guide

https://www.onetrust.com/resources/governing-ai-in-2026-a-global-regulatory-guide-white-paper...



https://medium.com/@dennisjanning_60371/digital-sovereignty-is-a-board-decision-most-boards-haven-t-made-it-0d5c92646743

https://www.rolandberger.com/en/Insights/Publications/AI-sovereignty.html

	Advantages	Trade-offs	Best Suited To
	Trust premium, consistency, simplified governance	Slower innovation, higher compliance costs	Healthcare, finance, education sectors where trust determines access
		Complexity costs, identity risks, arbitrage accusations	Global retailers, consumer tech, multinational manufacturers
	Deep alignment, clear governance, regional dominance	Limited scale, market exclusion, growth constraints	Regional champions, state-aligned enterprises, domestic leaders

...edin.com/pulse/ai-sovereignty-boards-guide-navigating-...onal-thomas-hvj3e/

Data Sovereignty: Who Controls What?

PLATFORM

Cloud, APIs, vendor dependencies

MODELS

Training, fine-tuning, inference

DATA

Customer data, operational data, employee data

Industry case example

Anonymous client

Sovereignty

- Data hosted in Europe (AWS Server = Frankfurt, etc.)
- No training on company data (OpenAI contract clause, strategic partnership with Anthropic initiated to diversify)
- Contractual control retained

Risk

- Data privacy risk: **medium**
  (high risk health data but good protection measures → medium)
- Model risk: **medium**
  (Strong human-in-the-loop rules)
- Reputational risk: **high**

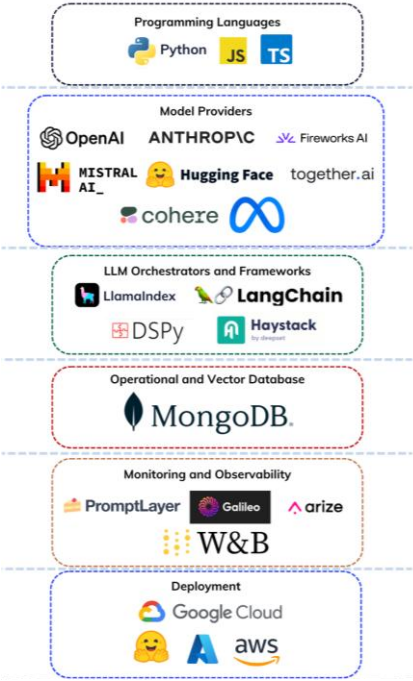
→ What matters: **trust, not just penalties**

Criticality

- AI is not business-critical
- Operations possible without AI
- Manual fallbacks in place

→ Result: lower regulatory burden, fewer documentation obligations

Illustrative tech stack



Value → Criticality → Risks → Control? → Make or Buy

Exercise 6

Siehe **Miro: im Team**

Case: „Versicherer führt KI-gestützte Schadenklassifizierung ein“

1. Bewerte value, risk, control
2. Management Entscheidung
3. Diskussion

10 min im Team

10 min Diskussion

What Risks Does a Head of AI Need to Manage?

Legal & Compliance

Data privacy, regulation, liability

Business

Wrong decisions, reputational damage, vendor lock-in

Technical

Data quality, model behaviour, security

Organisational

Skills, adoption, accountability

"Managing risk doesn't mean saying no — it means deciding consciously."

Make or Buy in AI: Not a Matter of Faith

Y-axis: Strategic Relevance (low → high)

🔧 HYBRID Buy the platform, build the logic *Central platform, custom logic on top*	⚙️ MAKE Core competency, competitive advantage *Build for differentiation*
🤷 DON'T CARE Don't invest *Low relevance, low differentiation*	🛒 BUY Commodity, standard functionality *Off-the-shelf is sufficient*

X-axis: Differentiation Potential (low → high)

"Make or Buy is a strategy decision, not a technology decision."

Exercise 7

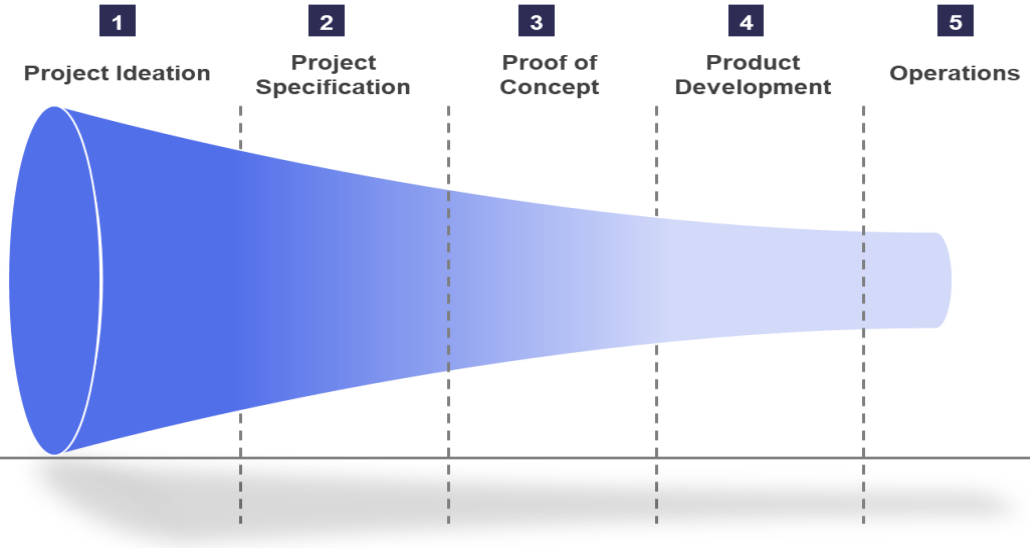
Siehe **Miro:**

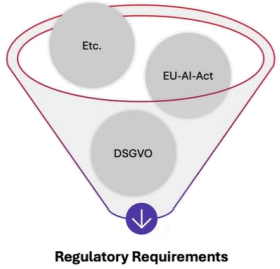
Make or Buy Decision – 2x2 Matrix

1. Use Cases einsortieren
2. Diskussion

10 min Gemeinsam

Compliance by design in Practice





Compliance by design: Aufgaben und Artefacte auf einzelne Phasen mappen!

Rechtl. / Regulatorische Anforderungen nicht erst am Ende, sondern von der ersten Idee fest in den Entwicklungszyklus einweben als integralen Bestandteil der Produkt DNA, wodurch Nachbesserungen, Verzögerungen, Scheitern vermieden warden.

Deep Dive on Wednesday!

Compliance by design in Practice

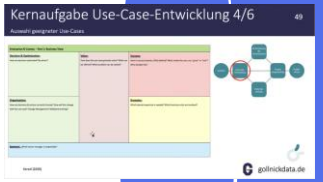
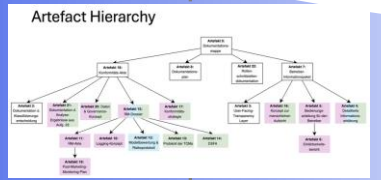
Project Ideation	**Project Specification**	**Proof of Concept**	**Product Development**	**Operations**





Deep Dive on Wednesday!

Risikoanalyse: Frühzeitige Einstufung der KI nach dem EU AI Act (verboten, hoch, gering). Rechtliche Durchführbarkeit.

Zweckbestimmung & DSGVO by Design: Datensparsamkeit, Anonymisierung, Pseud. Bereits bei Datenbeschaffung

EU-AI-Act integriert: Bias-Monitoring, Data Lineage, Explainability, Fairness + Dokumentation.

Testing & Validation: Compliance Tests in CI/CD Pipeline, human-in-the-loop mechanism

Monitoring: Laufende Überwachung der Modellleistung (Drift) und Verhaltens, autom. Logging.

Von der Strategie in die Produktion

Der Weg von der Idee zur skalierten KI-Lösung erfordert mehr als Technologie – er braucht Strategie, Struktur und Verantwortung.

Klare Ambition setzen

Ziele definieren, Wertpotenziale identifizieren

Strukturen aufbauen

Operating Model, Ownership und Governance verankern

Skaliert liefern

Use Cases priorisieren und konsequent in Produktion bringen
