Tag 1

13:30-15:00

15:30-17:00

KI-Strategie

gollnickdata.de

KI-Strategie:
Von der Ambition zur Umsetzung

- Warum KI allein keine Strategie ist
- Wie Unternehmen echten Wert schaffen
- Wie Governance & Compliance integriert werden

Agenda: KI-Strategie

Ziel: strategisches Fundament und Risikoverständnis legen

Tag 1

01
Was bedeutet „Strategie" wirklich?

02
Das KI-Strategie-Framework

03
Ziele setzen: Why and What?

Tag 2

04
Wertrealisierung: Wo entsteht Wert?

05
Operating Model & Organisation

06
Compliance als Designprinzip

07
Vom Use Case in die Produktion

Exercise 1

1. Hat euer Unternehmen eine KI-Strategie?
2. Woran erkennt man das konkret?
3. Ist es eher Vision oder Mittel zur konkreten Steuerung?

→ *3 Stichpunkte pro Gruppe!*

10 min 3-4er Breakouts

8 min Plenum

Why AI initiatives fail

Reasons for AI failure?

Too many PoCs without prioritization

"Currently 14 PoCs run by 8 data scientists"

"Management comes with new ideas each week"

Governance considered too late

"AI product was shut done due to regulatory risks"

"AI tech stack did not get IT security committee approval"

Insufficient resources and skills

"Global 1h AI training was launched"

"No AI product owner could be nominated as no one has the skills"

"Data & AI team needs to reduce headcount and cost of data platform as part of IT cost reduction"

Missing ownership and accountability

"AI product developed but no one to take over maintenance"

"AI product developed but too expensive"

No clear target vision

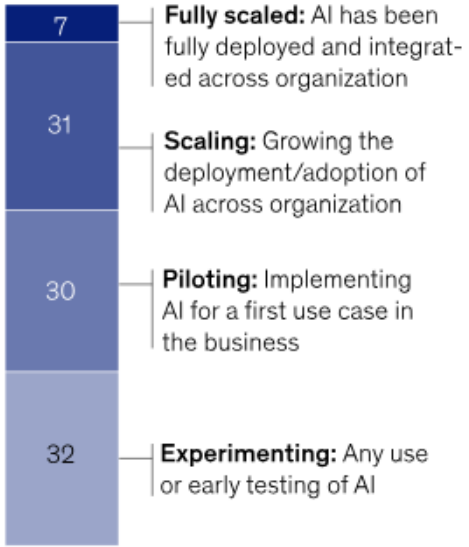

"Management stopped use case after 12 months as new ideas came in"

"Random list of efficiency cases and no effectiveness case on the list"

Study 1: status quo & AI success criteria

McKinsey 2025

Phase of AI use among organizations using AI in 2025

Studien-Erkenntnisse:

- KI-PoCs sind in Unternehmen weit verbreitet
- Skalierte, produktive Lösungen bleiben die Ausnahme
- Erfolgreiche Unternehmen nutzen KI weit über Effizienzgewinne hinaus als **Innovationstreiber und Transformationskatalysator** um ihre Geschäftsprozesse neu zu erfinden
- Was hält zurück:
  - **fehlende Strategie und Priorisierung** (AI roadmap, leadership alignment on value creation, human in the loop processes, senior leadership engagement)
  - **Fehlende Organisation und Governance** (Neue Prozesse, agile Arbeitsweise, schnelle Entwicklungszyklen, product mindset, strategic workforce planning anticipating AI)
  - **Mangelnde Daten**(qualität)
  - **Mangelnde Investment-Budgets**

Source: McKinsey Global AI Survey 2025 https://www.mckinsey.com/capabilities/quantumblack/our-insights/the-state-of-ai

The Core Problem Is Rarely AI — It's Missing Strategy & Execution

AI without a goal remains an experiment

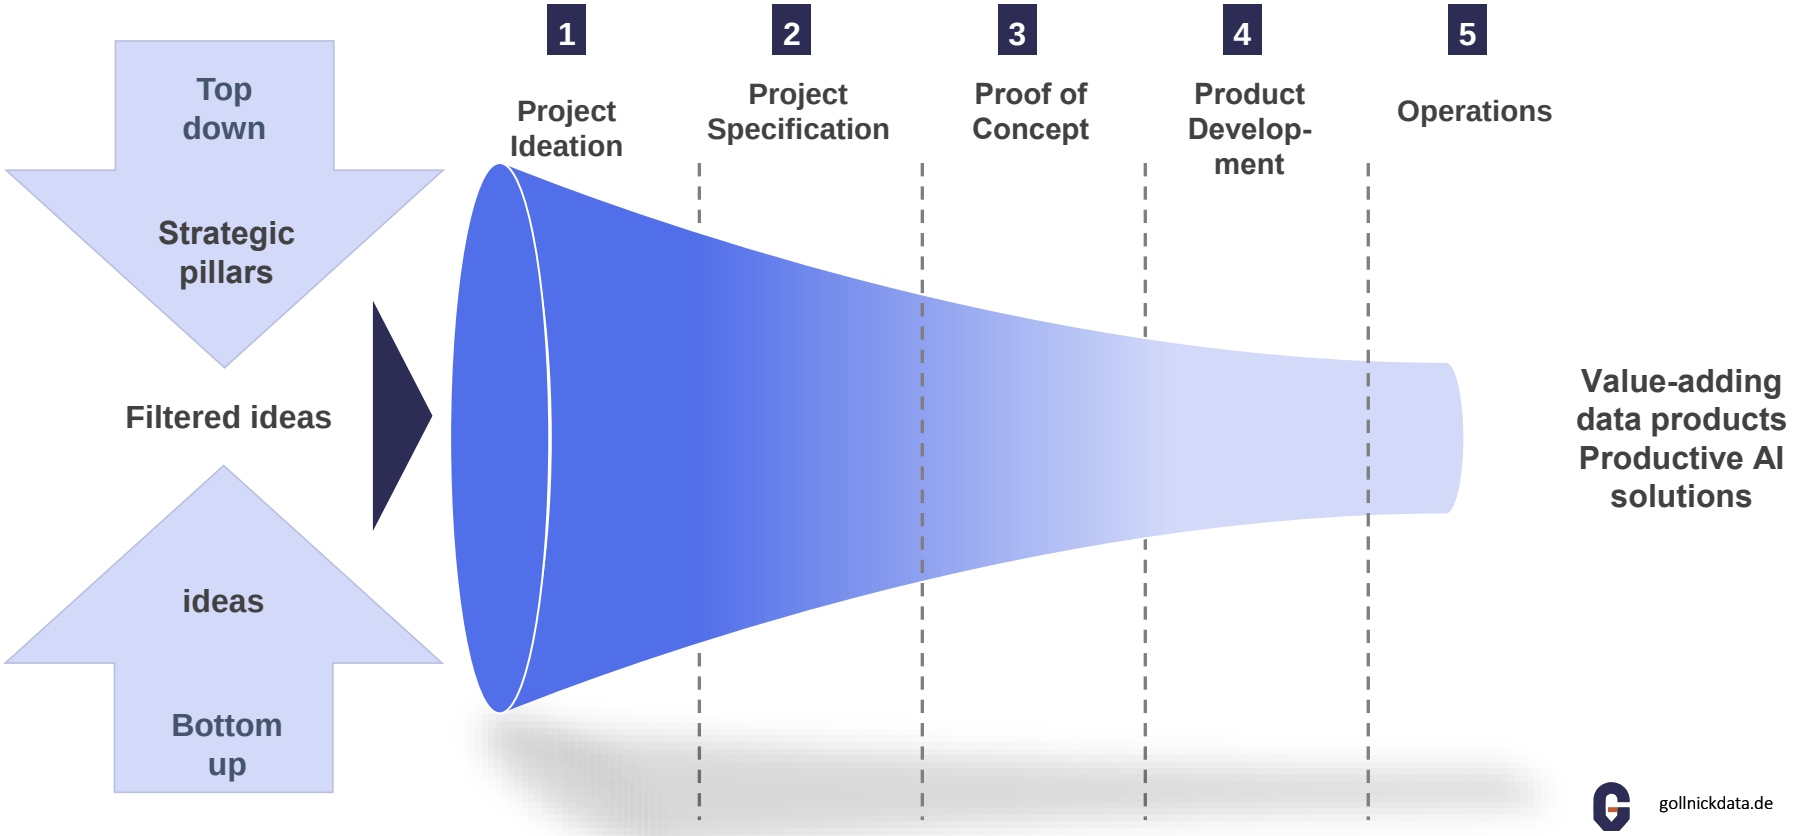

AI without accountability remains a toy

AI without governance becomes a risk

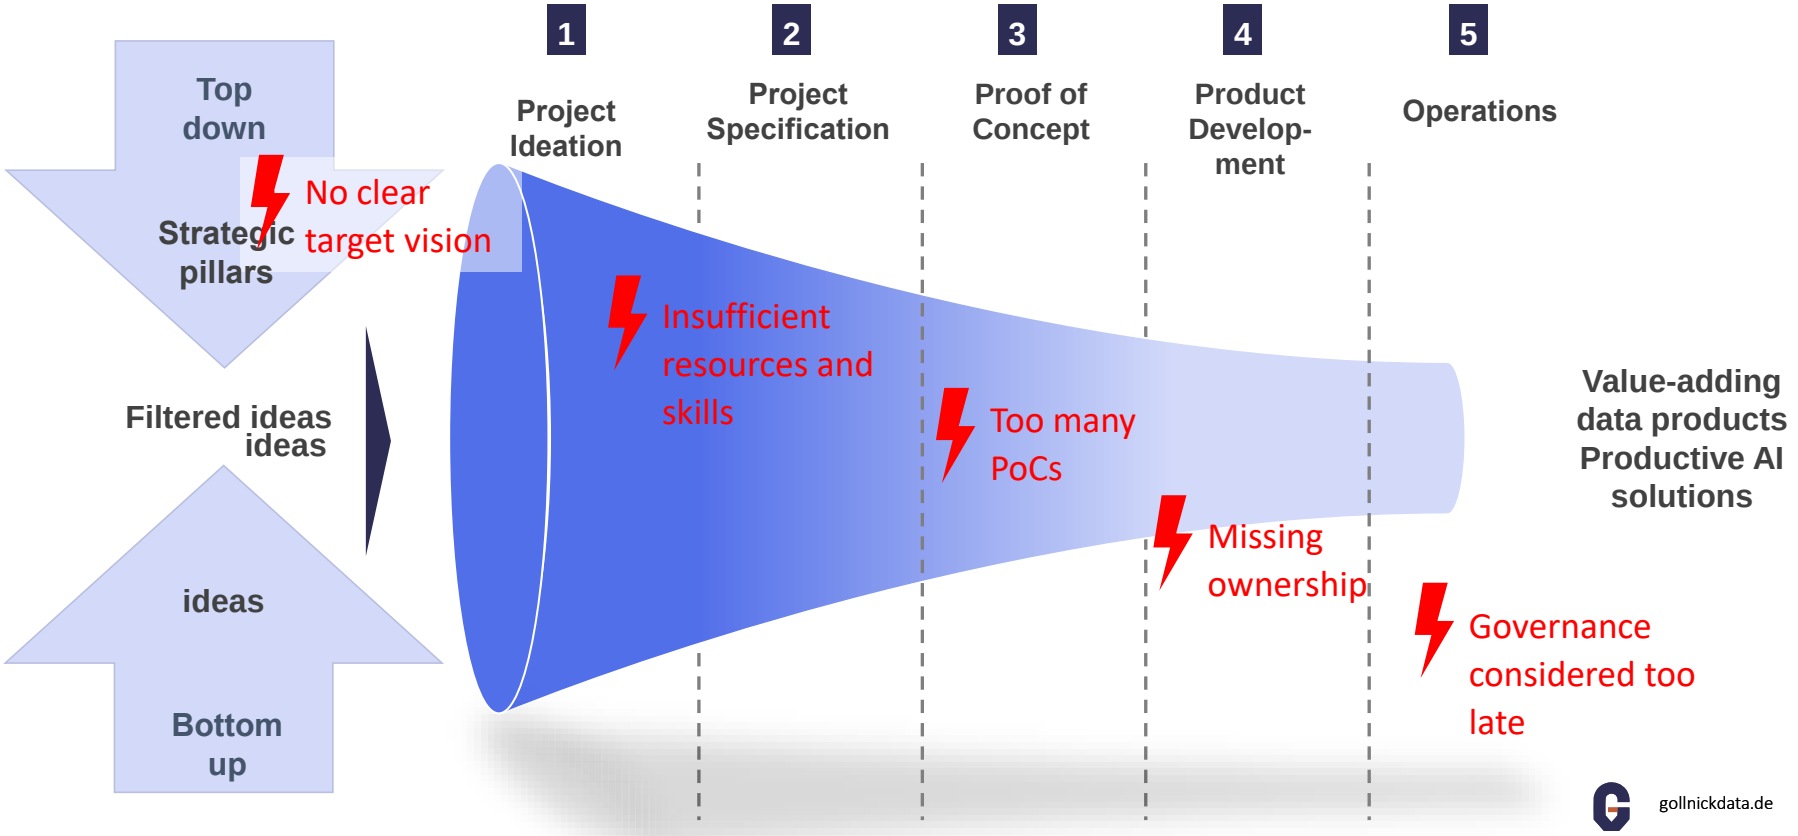

That's exactly why we need an AI strategy — not just AI projects.

AI innovation funnel, portfolio management

AI innovation funnel, portfolio management

Was ist wirklich neu an KI-Strategie?

KI ergänzt bekannte Frameworks – und bringt drei neue Dimensionen

Was ihr kennt	Was KI-Strategie ergänzt	Beispiel aus der Praxis
TOM / Operating Model	AI Hub + Spoke-Struktur · AI Ambassador · Lifecycle-Ownership (AI Product Manager)	*Phasenweiser Hub-Aufbau mit klaren Übergangs-Triggern*
Porter's Five Forces	Daten-Netzwerkeffekte · Data Moat als nachhaltiger Wettbewerbsvorteil	*Mehr Kundendaten → besseres Modell → mehr Kunden – klassische Kräfte unterschätzen das*
KPIs / OKR	Outcome-focused KPIs · Model Accuracy ≠ Business Value · Leading + Lagging Indicators	*KPI-Set mit Value Realization Rate als Headline Metric – Daneben mehr Metriken zu Speed, Durchlaufzeiten, HITL-Rate*
Innovationsfunnel / Stage-Gate	Fields of Action (Top-down, strateg. Filter) + Pain Points (Bottom-up Use Case library) · Stage-gated Funding	*Mehr-Phasen-Portfolioprozess mit Gates*
Make-or-Buy (IT)	Make/Buy/Partner + Datensouveränität · Everyday AI vs. Professional AI (Routing)	*Make-Entscheidungen nur für USP / Differenzierungs-Use Cases – One-Stop-Shop vs. Best-in-Class Entscheidungen*
Change Management	KI-Adoption: strukturell anderer Widerstand · Handoff-to-decay-Risiko vermeiden	*Ohne AI Product Manager verliert die Lösung nach Go-live ihren Wert – Verankerung von AI und Verantwortung für AI im gesamten Unternehmen.*

3 neue Dimensionen:

Experiment-first | **Compliance by Design** | **Datensouveränität** | **Company-wide**

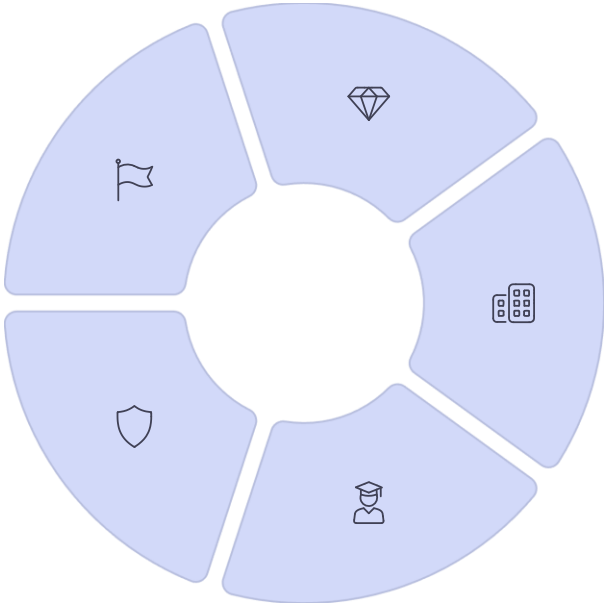

AI Strategy framework – 5 building blocks

Ambition & Target Vision

Wohin wollen wir mit KI? Was ist unser Nordstern?

Risk & Compliance by Design

Governance von Anfang an eingebettet

Value Pools & Prioritisation

Wo entsteht der größte Hebel für das Unternehmen?

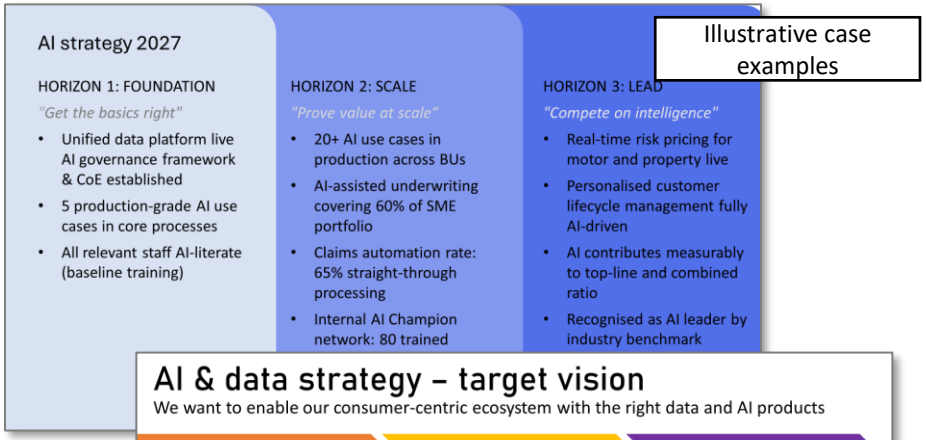

Operating Model

Organisation, Prozesse und Technologie im Einklang

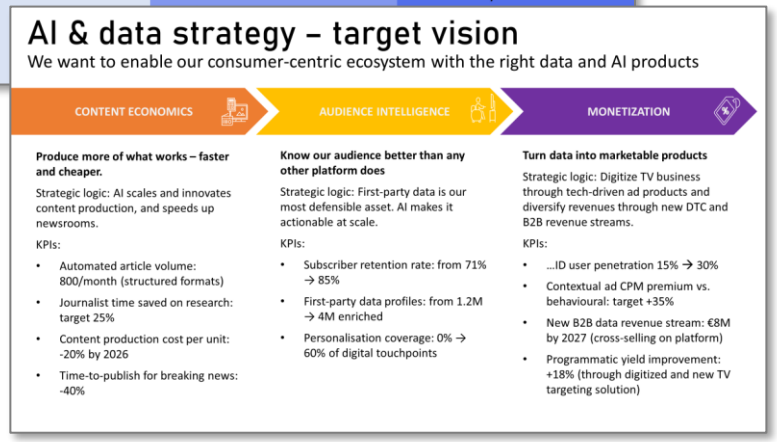

Capabilities

Kompetenzen, Talente und Ressourcen gezielt aufbauen

Ambition, target state and fields of action

Illustrative case examples

- Grounded in corporate strategy
  Explicit impact levers or roadmap alignment — not a parallel AI universe.
- Few ambitious KPIs — with a baseline
  2–4 metrics maximum. Where are we today? Where do we need to be — and by when?
- Strategic bets — not a use case catalogue
  What do we build, buy, or partner? What do we deliberately NOT do? Fields of action?
- Initiatives with resources and timeline
  Every strategic bet needs a budget, an owner, and a delivery commitment.
- Governance cadence locked in from day one
  Quarterly review minimum. OKRs, escalation paths, board visibility.

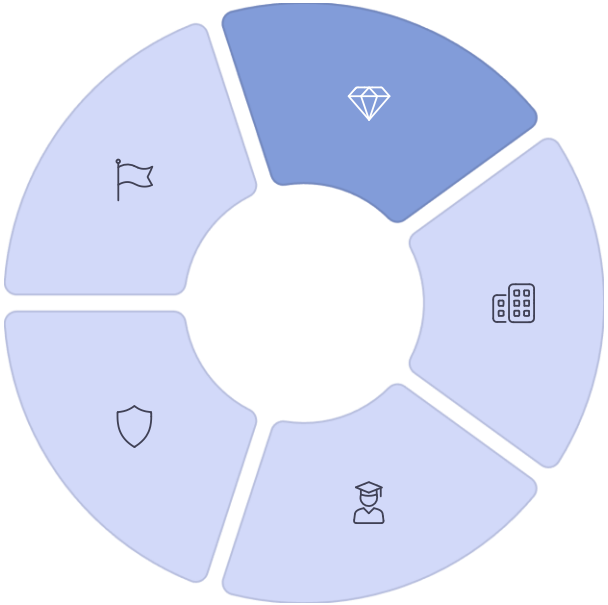

AI Strategy framework – 5 building blocks

Ambition & Target Vision

Wohin wollen wir mit KI? Was ist unser Nordstern?

Risk & Compliance by Design

Governance von Anfang an eingebettet

Value Pools & Prioritisation

Wo entsteht der größte Hebel für das Unternehmen?

Operating Model

Organisation, Prozesse und Technologie im Einklang

Capabilities

Kompetenzen, Talente und Ressourcen gezielt aufbauen

NordStyle AG – Unsere Case Study diese Woche

Unternehmens-Steckbrief	
Branche	Online-Retailer für nachhaltige Mode (B2C)
Größe	350 Mitarbeitende · München + Warenlager Polen
Sortiment	8.000 Produkte · 2 Mio. Seitenaufrufe/Monat
KI-Team heute	1 Data Analyst – kein KI-Team
Budget Jahr 1	~ 350.000 €
Verfügbare Daten	Webshop, CRM, Produktbilder/-texte, Lieferanten, Social Media, Reviews
Pain Points:	Retourenquote 38 % (Ø 12 €/Retoure) 3.000 Tickets/Woche (40 % „Wo ist mein Paket?“) Conversion Rate 2,1 %

Gruppe A

KI-Kundenservice

KI-Chatbot beantwortet häufige Anfragen automatisch („Wo ist mein Paket?“)
E-Mail Klassifikation für leitet Tickets direkt ans richtige Team weiter
Ziel: Entlastung Customer Service, kürzere Antwortzeiten, skalierbar ohne Personalaufbau

Gruppe B

Retouren-Prognose

ML-Modell schätzt Retourenverhalten je Bestellung, ermöglicht frühzeitige Gegenmaßnahmen (Größenhinweise, Produktbeschreibung, Checkouthinweise)
Ziel: Retourenquote senken, Marge verbessern, Lager entlasten

Gruppe C

KI-Content-Erstellung

Produkttexte, Social Media, Newsletter kreiiert via GenAI (anstelle manuell)
GenAI generiert Erstversion, Marketing Team reviewed und finalisiert
Ziel: Content-Volumen steigern, Conversion Rate verbessern, Marketing-Aufwand reduzieren

Exercise 2

1. NordStyle AG möchte mit KI durchstarten und nach 12 Monaten Ergebnisse sehen. Welcher der drei NordStyle Use Cases hat strategische Priorität?
2. Was würdet Ihr dem Management Board empfehlen und warum?

→ 10 min im Team

→ 10 min Plenum

Pause

15:00-15:30

Value pools

Umsatzsteigerung

Predictive Cross-Selling im Einzelhandel – KI erkennt Kaufabsichten und empfiehlt proaktiv.

Kostensenkung

Automatisierte Dokumentenverarbeitung im Banking – Effizienz steigern, Fehler reduzieren.

Risikoabsicherung

Betrugserkennung in der Versicherung – Anomalien in Echtzeit identifizieren und abwehren.

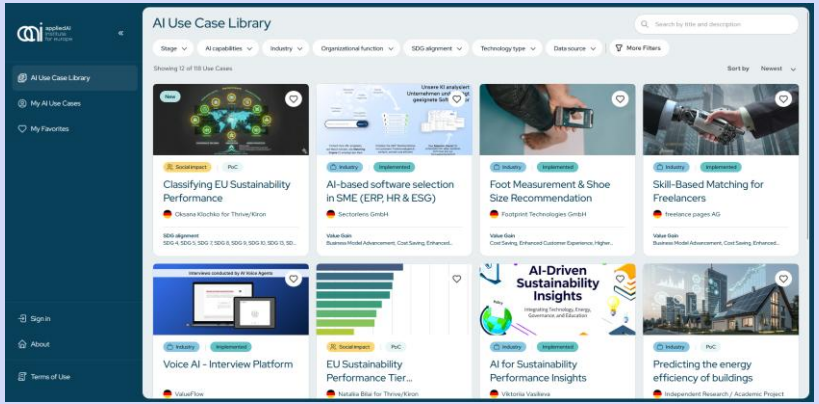

Erlebnis & Qualität

KI-Kundenservice-Assistent in Telko – 24/7 Verfügbarkeit bei konsistenter Servicequalität.

Use case libraries

Applied AI Institute: Use Case Library

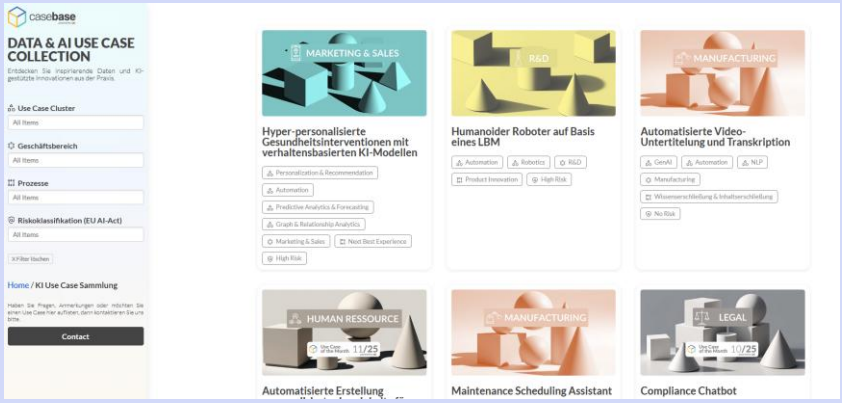

- Ca. 120 use cases
- Uploads from companies / partners

https://ucp.appliedai-institute.de/en/use-cases

Casebase: Use Case Library

- Ca. 140 use cases
- Incl. risk classification (EU AI-Act)

https://casebase.ai/de/ai-use-case-collection /

Which AI Use Cases Are Really Worth It?

Not everything that's possible is worthwhile.

🔭 STRATEGIC LIGHTHOUSES High value, high effort → **invest deliberately** *Example: "Proprietary Risk Model"*	🏆 QUICK WINS High value, manageable effort → **start now** *Example: "Email Classification"*
🚫 STAY AWAY Low value, high effort → **consciously stop** *Example: "Fully Autonomous Underwriting"*	💡 NICE TO HAVE Low value, low effort → **only if capacity allows** *Example: "AI-generated Internal Reports"*

Y-axis:
Business Impact
(low → high)

X-axis: Feasibility (low → high)
Also: probability that impact is reached

Impact Factors

- Revenue
- Efficiency
- Customer Satisfaction
- Risk Reduction

Feasibility Factors

- Data Availability
- Complexity
- Time-to-Value
- Change Management / Business Engag.

Exercise 3

Siehe **Miro:**

1. Ordnet Euren NordStyle Use Case in die Impact/Feasibility Matrix ein
2. Welche Kennzahl verbessert Ihr konkret?
3. Kurze Diskussion im Plenum

8 min Erarbeitung in 3 Teams / Breakouts

7 min Vorstellung

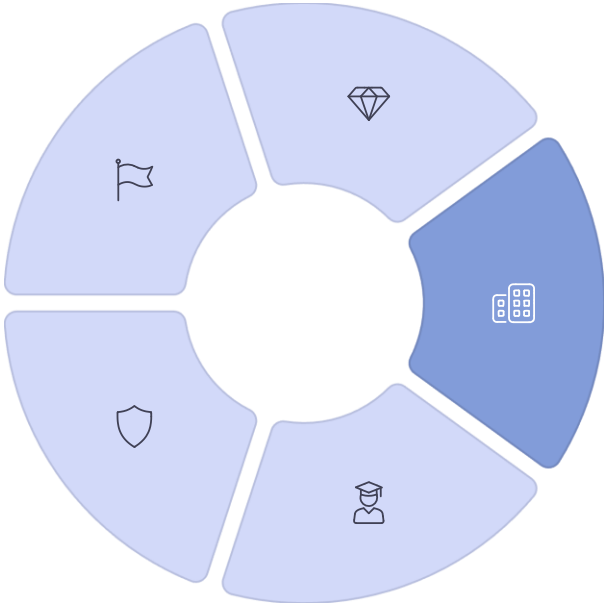

AI Strategy framework – 5 building blocks

Ambition & Target Vision

Wohin wollen wir mit KI? Was ist unser Nordstern?

Risk & Compliance by Design

Governance von Anfang an eingebettet

Value Pools & Prioritisation

Wo entsteht der größte Hebel für das Unternehmen?

Operating Model

Organisation, Prozesse und Technologie im Einklang

Capabilities

Kompetenzen, Talente und Ressourcen gezielt aufbauen

Steering & Governance: Who Decides What?

Unklare Ownership führt zu Stillstand

Who prioritises use cases?

Defining which AI initiatives move forward — and which don't.

Who owns the budget?

Allocating and controlling financial resources for AI investments.

MIT Sloan Review

5. Debate will continue over who should manage AI.

Randy's latest survey of data and AI leaders in large organizations — the 2026 AI & Data

Who carries the risk?

Accountability for model failures, data incidents, and operational risk.

Who is accountable for compliance?

Ensuring regulatory obligations are met across the full AI lifecycle.

How Do Companies Organise AI?

Centralised

- Central decision-making
- Unified standards
- High control

Best fit: High regulation, low AI maturity

Hybrid

- Central guardrails
- Decentralised execution
- Clear roles and responsibilities

Best fit: Multiple business units, scaling planned

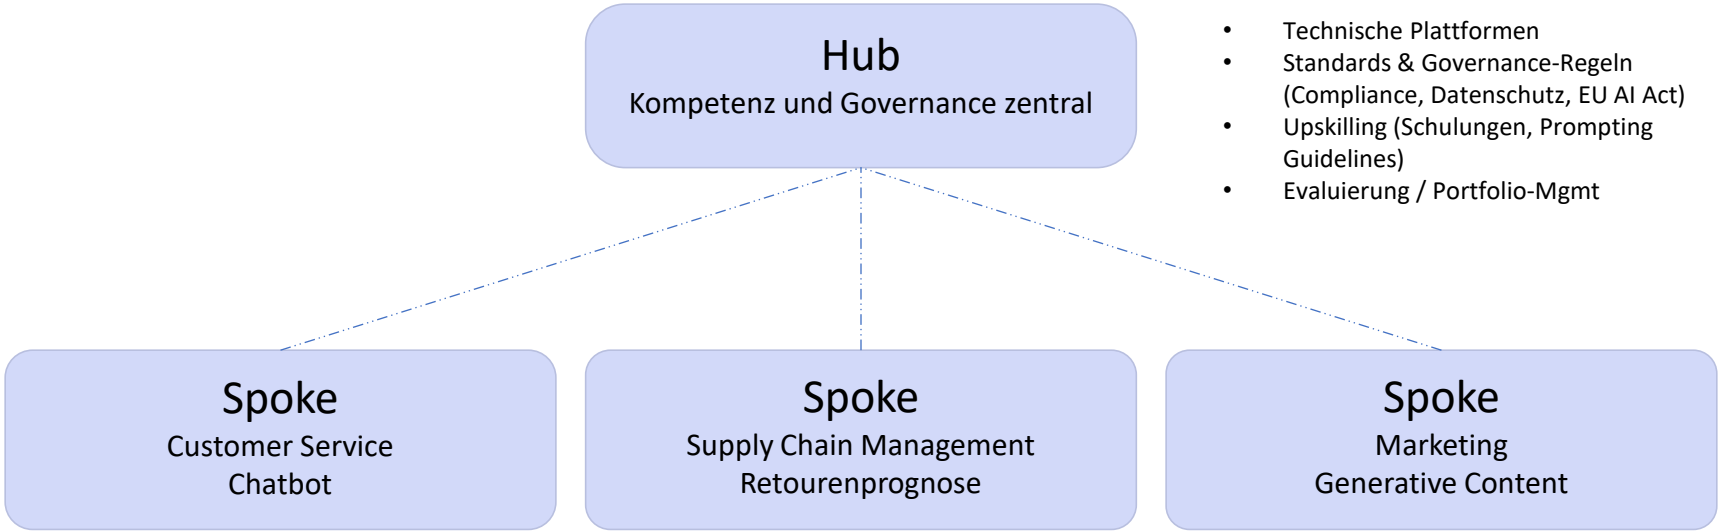

Decentralised

- Business units drive AI
- Minimal central role
- High speed

Best fit: High AI maturity, innovation focus, lower regulatory pressure

Operating Model ≠ Org Chart → It's about decisions & accountability

AI - Hub & Spoke concept

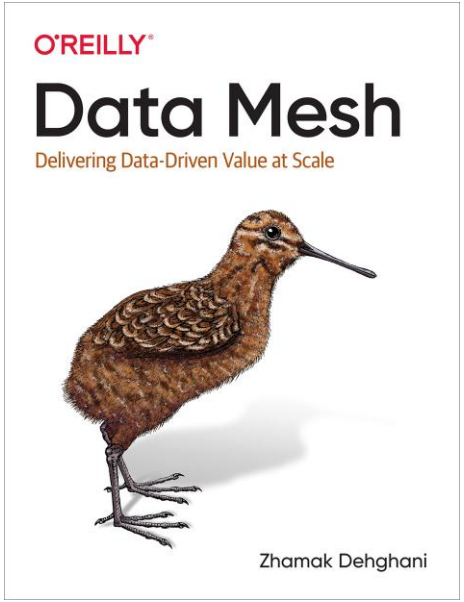

- Technische Plattformen
- Standards & Governance-Regeln (Compliance, Datenschutz, EU AI Act)
- Upskilling (Schulungen, Prompting Guidelines)
- Evaluierung / Portfolio-Mgmt

Execution und Domain-Wissen dezentral

- Use Case Ownership
- Business Requirements
- Testing & Feedback
- Deployment innerhalb der Domain

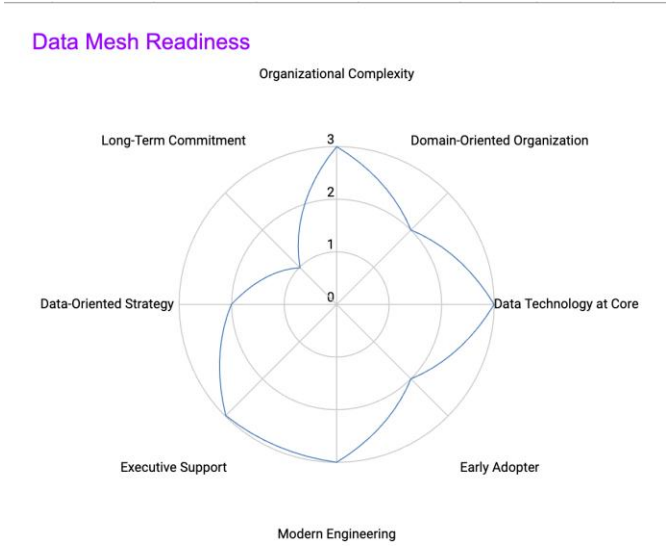

Data Mesh concept

https://www.amazon.de/-/en/Data-Mesh-Delivering-Data-Driven-Value/dp/1492092398

Hybrid "federated" approach

- **Domain-driven Data Ownership:** Business units manage data – no central bottleneck!
- **Data as a Product:** Data is treated as a product, ensuring quality, discoverability and usability for users
- **Self-serve Data Platform:** centralized IT team provides the platform
- **Federated Computational Governance:** A federated model ensures data interoperability and compliance through automated, shared policies

Sample assessment of company readiness by https://caroli.org/en/data-mesh-readiness/

Exercise 4

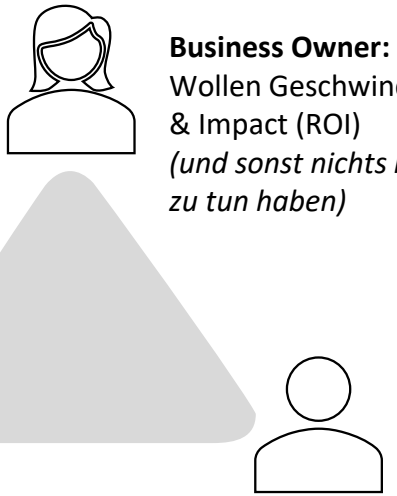

1. NordStyle: 3 Data Analysts, no AI team, 350 MA, Lager in Polen
2. Welches Operating Model passt?
3. Skizziert: Wer verantwortet den Use Case? Wer braucht welche Rolle? Zentral, Hybrid oder Dezentral?

10 min Plenum Diskussion

Bindemittel: AI Culture

Die richtige Einstellung…

Business Owner:
Wollen Geschwindigkeit
& Impact (ROI)
(und sonst nichts mit der „Technik“ zu tun haben)

IT & Data Governance:
Wollen Sicherheit &
Skalierbarkeit (Standards)

Legal & Betriebsrat:
Wollen Schutz & Transparenz
(Compliance)

Bindemittel: AI Culture

Die richtige Einstellung…

Ownership statt Support: Ein Operating Model funktioniert nur, wenn die Fachbereiche die Verantwortung für ihre "Datenprodukte" übernehmen.

Rollenbeschreibung
RACI
Budgetierung / Einsparziele
Interne Verrechnung

Die Rolle der Führung: Management muss klare Ziele und Raum für Experimente schaffen, da KI-Projekte keine 100% Erfolgsgarantie haben.

KI-Strategie und KPIs
Mgmt-SteerCo und OKRs
Innovations-Budget & POCs
Priorisierungsprozess

Stakeholder-Management:
Frühzeitige Einbindung: Besonders den Betriebsrat, Compliance nicht als "Prüfer am Ende", sondern als "Gestalter der Leitplanken" verstehen.

Regel-Gremien
Transparenz über Fortschritt, Priorisierung, KPIs

Ängste adressieren: Offene Kommunikation über die Veränderung von Jobprofilen (Substitution vs. Augmentation).

Transformations-Roadmap
Change Management
Agile Coaching

Kulturelle Hürde: Weg von "Daten-Silos" hin zu "Data Sharing" (entscheidend für Data Mesh).

Tech-Skill für alle

AI Strategy framework – 5 building blocks

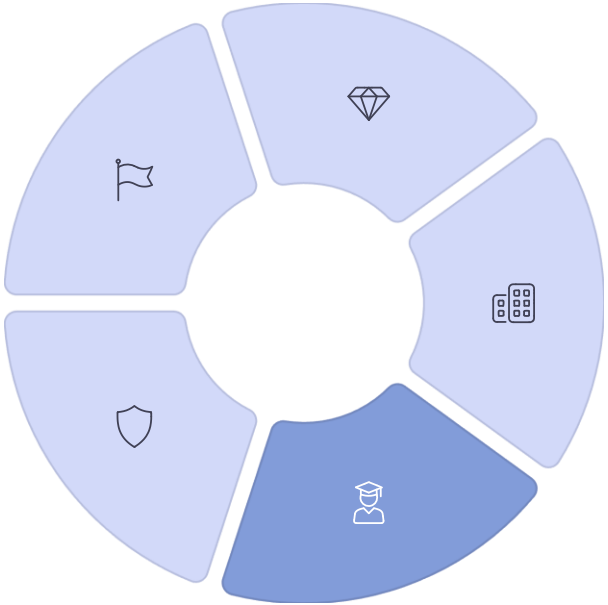

… und die richtigen Skills

Ambition & Target Vision

Wohin wollen wir mit KI? Was ist unser Nordstern?

Risk & Compliance by Design

Governance von Anfang an eingebettet

Value Pools & Prioritisation

Wo entsteht der größte Hebel für das Unternehmen?

Operating Model

Organisation, Prozesse und Technologie im Einklang

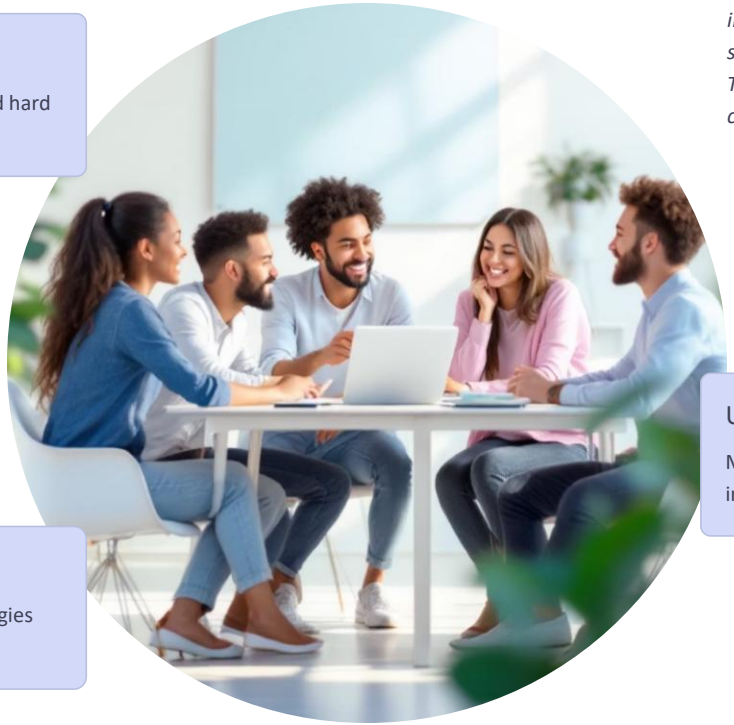

Capabilities

Kompetenzen, Talente und Ressourcen gezielt aufbauen

The team – the biggest bottleneck?

Scarce Talent

AI talent is scarce, unevenly distributed, and hard to retain

Most companies underestimate the human investment required to make AI strategies succeed.
The real constraint is not compute — it's capability.

Underestimated Investment

Most companies underestimate the human investment required

Capability Gap

The capability gap is the #1 reason AI strategies stall after PoC

What Skills does an AI-ready organisation need?

Strategic & Leadership Skills

- Defining AI ambition and priorities
- Managing AI programmes and portfolios
- Communicating AI decisions to the board

Bridging Skills
Most Critical & Most Missing

- Translating business problems into AI use cases
- Evaluating AI outputs with domain knowledge
- Driving adoption and change in business units

Technical Skills

- Data engineering and architecture
- Model development and fine-tuning
- MLOps, monitoring, and deployment

Most organisations are strongest at Technical Skills — and weakest exactly where it matters most.

Who Does What? The Roles That Make AI Work

Every role plays a part in making AI succeed.

Business (“Domain”)

- Executive AI Sponsor
- **AI Product Owner**
- **Business Translator / AI Champion**

Centre

- AI Programme Manager
- Data Owner / Data Steward
- AI Ethics & Compliance Officer

Technical

- **Data Engineer**
- **ML Engineer / Data Scientist**
- MLOps Engineer

Mit dem Aufkommen von GenAI werden KI Rollen technischer (mehr Integrationsarbeit)
*Siehe auch morgen: Aufgaben der **Kernrollen***

The Business Translator

- Bridges technical teams and business units
- Speaks both languages fluently
- Most impactful early hire — rarely on any org chart

MLOps & Compliance Roles

- Getting to production requires more than building
- Ongoing monitoring, retraining, incident response
- Chronically understaffed in most organisations

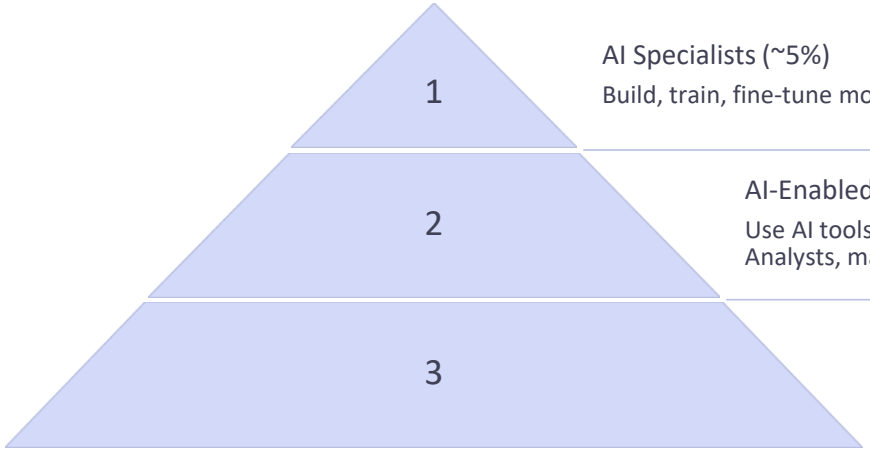

For Each Skill: Develop, Hire, or Source Externally?

DEVELOP Internally	HIRE Externally	PARTNER / PLATFORM
When: Long-term need, tied to proprietary data or processes	**When:** Skill is scarce, needed fast, or too costly to grow from scratch	**When:** Commodity skill, temporary need, or already covered by tooling
Examples: Business Translators, internal AI governance, domain fine-tuning	**Examples:** Senior ML Engineers, AI Legal/Ethics specialists	**Examples:** Cloud AI platforms, consulting sprints, API model access
Tradeoff: Takes time — but builds lasting competitive advantage	**Tradeoff:** Cost and integration — but accelerates capability quickly	**Tradeoff:** Creates dependency — manage contractually and deliberately

"The right mix follows your strategy — not your hiring budget."

AI Readiness for the whole organisation

Siehe auch Change Management

AI Specialists (~5%)

Build, train, fine-tune models. MLOps, data engineering, AI architecture.

AI-Enabled Professionals (~30–40%)

Use AI tools confidently. Evaluate, prompt, and critically assess AI outputs. Analysts, marketers, lawyers, HR, finance, ops.

AI-Aware Employees (All remaining)

Understand what AI is and what it is not. Know when to use it — and when not to. Basic data literacy and ethical awareness.

Tier 1	Tier 2	Tier 3
Build: deep investment, narrow group	Augment: highest ROI for upskilling investment	Adopt: culture, trust, and awareness

"The question is not 'who needs AI skills' — it's 'what level does each role need?'"

WEF Study: Skills are changing

WORLD ECONOMIC FORUM — FUTURE OF JOBS REPORT 2025

1,000+ employers · 14M+ workers · 55 economies

Skills Growing in Importance ↑

1. AI & Big Data Literacy — #1 fastest-growing skill globally
2. Analytical & Critical Thinking
3. Creative Thinking & Problem Solving
4. Networks, Cybersecurity & Tech Literacy
5. Resilience, Adaptability & Lifelong Learning
6. Leadership & Social Influence
7. Curiosity — ability to learn continuously

Skills Declining in Relevance ↓

1. Manual data entry & repetitive clerical tasks
2. Routine document processing
3. Basic bookkeeping & administrative coordination
4. Low-complexity customer communication
5. Fixed-procedure quality control

39%

Skills Change by 2030

of workers' core skills will change

86%

AI Transformation

of employers expect AI to transform their business

56%

Wage Premium

for workers with verified AI skills (PwC, 2025)

63%

Skills Gap Barrier

of employers cite skills gap as their #1 barrier to AI transformation

"The gap between AI-skilled and AI-unaware employees is already a competitive divide."

Source: World Economic Forum "Future of Jobs Report 2025" - https://www.weforum.org/publications/the-future-of-jobs-report-2025/

The CDO Can't Do It Alone – And Shouldn't Have To

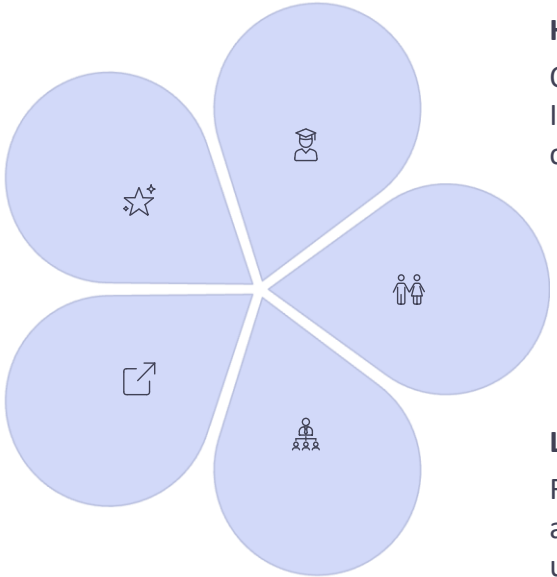

Organisational AI enablement is a team sport!

AI Center of Excellence (CoE)

Sets standards, governance, tooling, and guardrails. Enables everyone else to succeed.

External Partners & Platforms

Coursera, LinkedIn Learning, Microsoft, Google, AWS AI certifications. Cover the long tail at low cost.

HR & L&D

Owns the upskilling curriculum. Integrates AI literacy into onboarding & career paths. Deploys learning at scale.

Business Unit AI Champions

Embedded in each department. Drive adoption, surface feedback, translate needs. "Trusted peer."

Line Managers

Role-model AI adoption. Set expectations and create psychological safety. An underestimated lever.

❌ Common Failure Pattern

"The CAIO is asked to lead AI strategy AND train the entire workforce AND manage vendor relationships AND drive adoption in every BU. That's four jobs. It doesn't work."

✅ What Works

"The CoE sets the standard. HR delivers it. Champions embed it. Managers normalise it. The CAIO orchestrates — not executes."

AI Strategy framework – 5 building blocks

Ambition & Target Vision

Wohin wollen wir mit KI? Was ist unser Nordstern?

Risk & Compliance by Design

Governance von Anfang an eingebettet

Value Pools & Prioritisation

Wo entsteht der größte Hebel für das Unternehmen?

Operating Model

Organisation, Prozesse und Technologie im Einklang

Capabilities

Kompetenzen, Talente und Ressourcen gezielt aufbauen

Why Compliance Is the Beginning - Not the End

EU AI Act

Risk classes & documentation obligations

GDPR

Privacy by design across the full lifecycle

Model Risks

Bias, drift, explainability

Documentation Duty

Continuous, not a one-time audit

Core Principle

"Compliance is not a barrier — it's a design parameter."

Further regulations:

Deep dive follows in the Compliance block!

A trilemma:

optimization for trust, speed and control

◀ Risk & Reputation

Regulatory, Privacy, Public **Trust**

MAKE / BUY / PARTNER

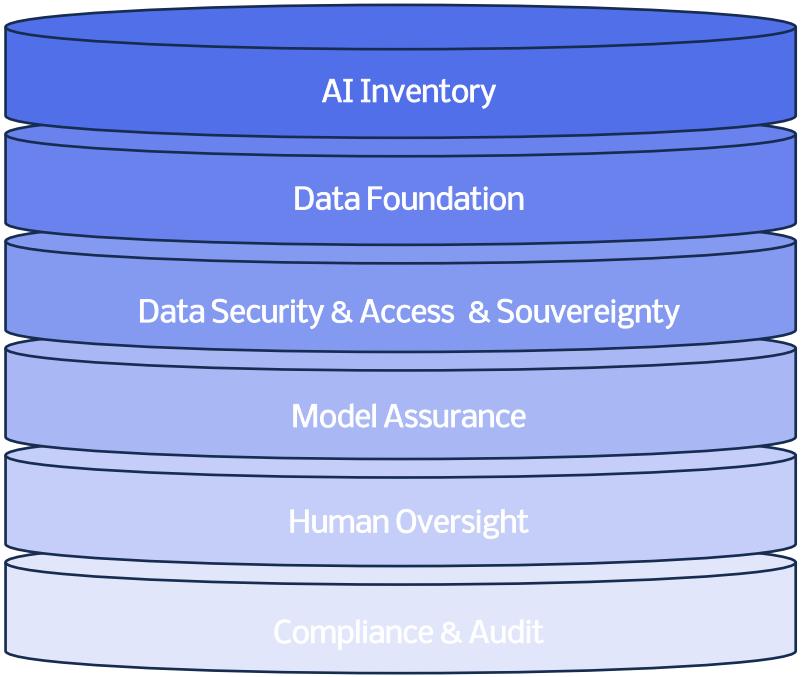

▲ Value & Benefit

Business Impact, Efficiency, Growth, **Speed**

▶ Sovereignty & Control

Control: Data, Models, Dependencies

Compliance-Architektur

Welche KI haben wir überhaupt?

Worauf basiert die KI?

Ist die KI geschützt?

Funktioniert sie verlässlich u. fair?

Behält der Mensch die Kontrolle?

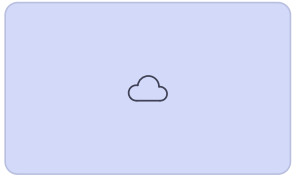

Können wir nachweise erbringen?

Deep Dive morgen!

Nordstyle Beispiel

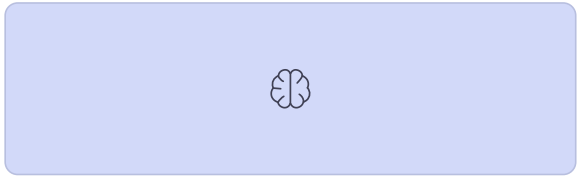

Schicht	NordStyle Beispiele Fragen
AI Inventory	Ist Azure KI Nutzung erfasst und wer ist intern verantwortlich?
Data Foundation	Woher kommen die Trainingsdaten für das Retourenmodell und sind diese unverzerrt?
Data Security & Access & Souvereignty	Wer darf Konversationen mit Kunden einsehen ? Wo sind diese abgelegt, wie werden sie verarbeitet?
Model Assurance	Funktioniert der Chatbot gleich gut für Kunden aus Polen wie aus München?
Human Oversight	Wenn das Retourenmodell einen Kauf blockiert, wer kann das übersteuern?
Compliance & Audit	Wenn der Datenschutzbeauftragte fragt, könnt Ihr nachweisen, was das Modell entschieden hat?

Data Sovereignty: Who Controls What?

PLATFORM

Cloud, APIs, vendor dependencies

MODELS

Training, fine-tuning, inference

DATA

Customer data, operational data, employee data

Industry case example 1

Anonymous client

Sovereignty

- Data hosted in Europe (AWS Server = Frankfurt, etc.)
- No training on company data (OpenAI contract clause, strategic partnership with Anthropic initiated to diversify)
- Contractual control retained

Risk

- Data privacy risk: **medium**
  (high risk health data but good protection measures → medium)
- Model risk: **medium**
  (Strong human-in-the-loop rules)
- Reputational risk: **high**

→ What matters: **trust, not just penalties**

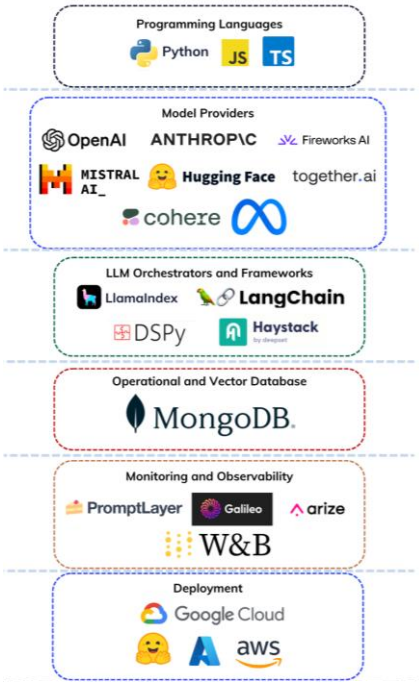

Criticality

- AI is not business-critical
- Operations possible without AI
- Manual fallbacks in place

→ Result: lower regulatory burden, fewer documentation obligations

Value → Criticality → Risks → Control? → Make or Buy

Illustrative tech stack

Industry case example 2

Anonymous client

AI Infrastructure Aligned with Data Classification, industrial manufacturer R&D

International / Public Cloud

Public Cloud

- Leading AI tools & technologies
- SaaS and hyperscaler AI services (e.g. Azure OpenAI)
- Current agent harnesses: Cursor, GitHub Copilot

Low sensitivity · unrestricted data

International / EC Cloud

European compliant

Hybrid Approach

- Sovereign baseline AI compute operated on-premises
- Scalable AI resources via EU-sovereign cloud STACKIT for burst capacity
- Agent harnesses: open-weight models, Mistral Vibe, OpenCode

Internal / confidential data

VS-NfD Cloud

Verschlusssache – nur für den Dienstgebrauch

On-Premises Cloud

- Fully on-premises AI infrastructure, no external data transfer
- VS-NfD-compliant architecture and operations
- Agent harnesses: Mistral Vibe & proprietary open-source solutions

Classified / restricted data

Exercise 5

Siehe **Miro: im Team**
NordStyle nutzt Azure OpenAI für KI-Dienste.
Gruppe A: Welche Kundendaten fließen in den Chatbot? Was bedeutet das für Auftragsverarbeitung mit Microsoft?
Gruppe B: Wo liegen die Daten und wer darf darauf zugreifen?
Gruppe C: Wer besitzt den Output? Welche Copyright Fragen entstehen?

1. Fragen oben je Gruppe
2. Wo setzt Ihr die rote Linie zwischen akzeptabler Cloud-Nutzung und Datensouveränität?
3. Diskussion

10 min im Team
10 min Diskussion

What Risks Does a Head of AI Need to Manage?

Legal & Compliance

Data privacy, regulation, liability

Business

Wrong decisions, reputational damage, vendor lock-in

Technical

Data quality, model behaviour, security

Organisational

Skills, adoption, accountability

"Managing risk doesn't mean saying no — it means deciding consciously."

Make or Buy in AI: Not a Matter of Faith

Y-axis: Strategic Relevance (low → high)

🔧 HYBRID Buy the platform, build the logic *Central platform, custom logic on top*	⚙️ MAKE Core competency, competitive advantage *Build for differentiation*
🤷 DON'T CARE Don't invest *Low relevance, low differentiation*	🛒 BUY Commodity, standard functionality *Off-the-shelf is sufficient*

X-axis: Differentiation Potential (low → high)

"Make or Buy is a strategy decision, not a technology decision."

Exercise 6

Siehe **Miro:**

Make or Buy Decision – 2x2 Matrix

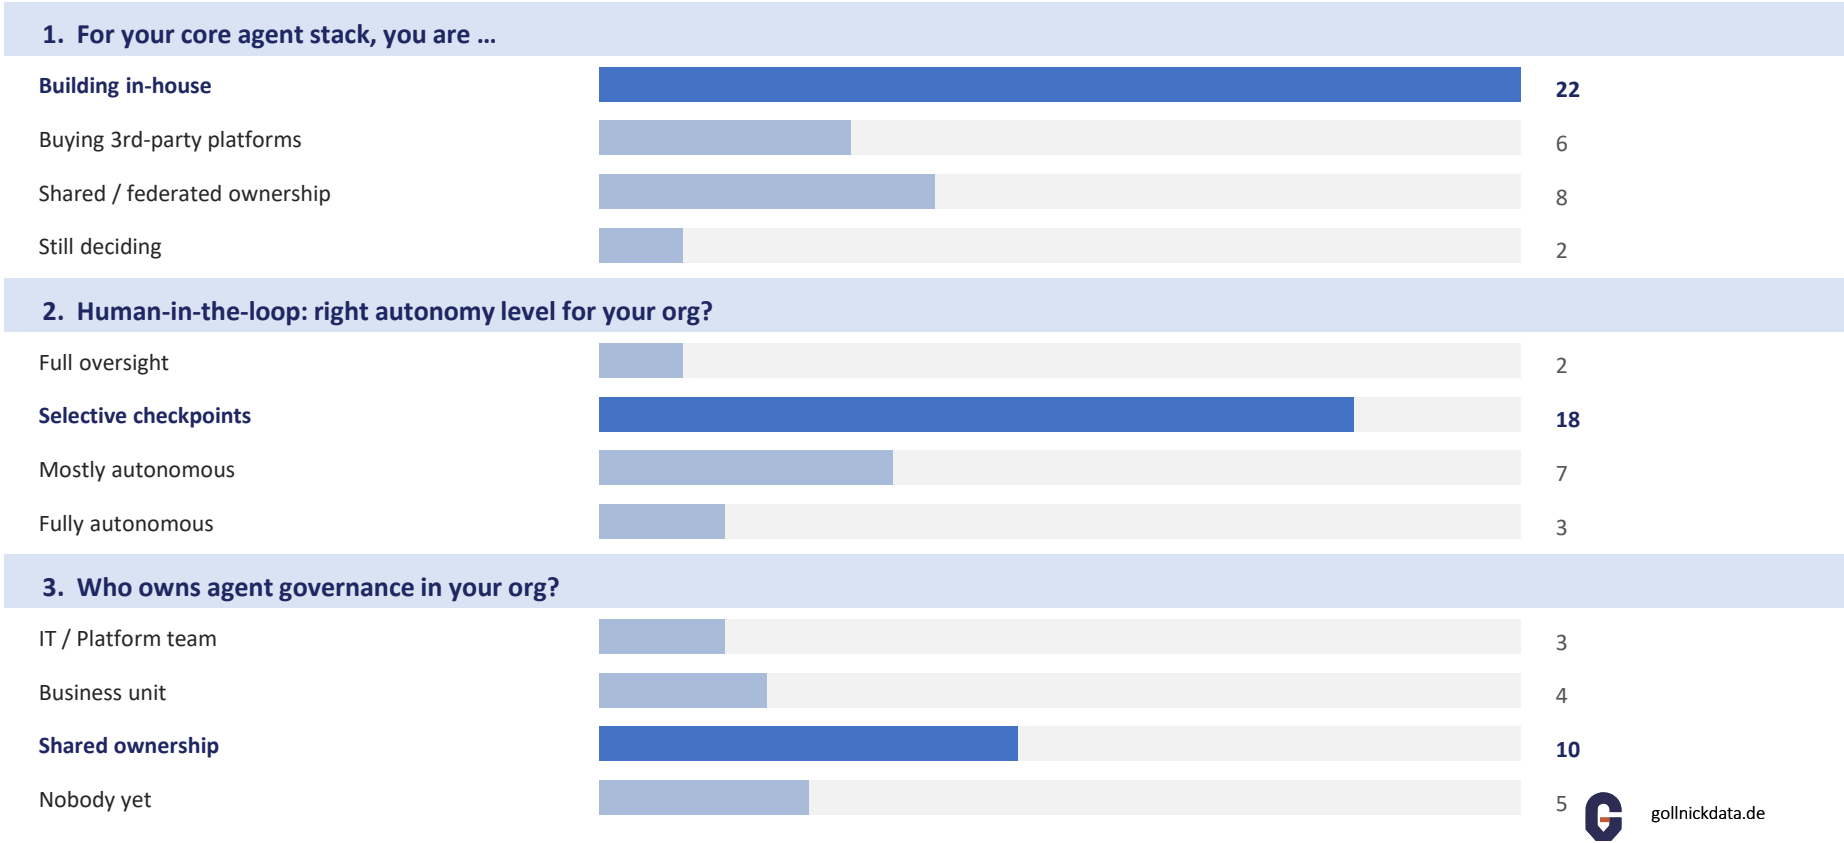

1. Use Cases einsortieren
2. NordStyle UseCases: was lässt sich mit Budget von 350k realistisch umsetzen?
3. Diskussion

10 min Gemeinsam

gollnickdata.de

Compliance by design in Practice

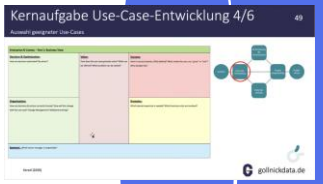

Compliance by design: Aufgaben und Artefacte auf einzelne Phasen mappen!

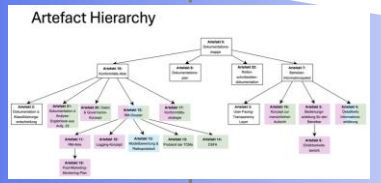

Rechtl. / Regulatorische Anforderungen nicht erst am Ende, sondern von der ersten Idee fest in den Entwicklungszyklus einweben als integralen Bestandteil der Produkt DNA, wodurch Nachbesserungen, Verzögerungen, Scheitern vermieden warden.

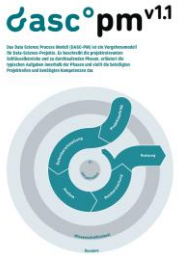

Deep Dive on Wednesday!

Compliance by design in Practice

1	2	3	4	5
Project Ideation	Project Specification	Proof of Concept	Product Development	Operations

Deep Dive on Wednesday!

Risikoanalyse: Frühzeitige Einstufung der KI nach dem EU AI Act (verboten, hoch, gering). Rechtliche Durchführbarkeit.

Zweckbestimmung & DSGVO by Design: Datensparsamkeit, Anonymisierung, Pseud. Bereits bei Datenbeschaffung

EU-AI-Act integriert: Bias-Monitoring, Data Lineage, Explainability, Fairness + Dokumentation.

Testing & Validation: Compliance Tests in CI/CD Pipeline, human-in-the-loop mechanism

Monitoring: Laufende Überwachung der Modellleistung (Drift) und Verhaltens, autom. Logging.

Von der Strategie in die Produktion

Der Weg von der Idee zur skalierten KI-Lösung erfordert mehr als Technologie – er braucht Strategie, Struktur und Verantwortung.

Klare Ambition setzen

Ziele definieren, Wertpotenziale identifizieren

Strukturen aufbauen

Operating Model, Ownership und Governance verankern

Skaliert liefern

Use Cases priorisieren und konsequent in Produktion bringen
